6<sup>th</sup> of March at Physics and Geometry of F-theory 2018 in IFT

- The main focus of this talk is five-dimensional gauge theories with eight supercharges.
- 5-brane web diagrams in type IIB string theory provides a powerful tool to study the five-dimensional gauge theories.
- For example, non-perturbative effects and various dualities of five-dimensional gauge theories may be explicitly seen from the construction using 5-brane webs.

Aharony, Hanany 97

Aharony, Hanany, Kol 97

- 5-brane web diagrams realize  $SU(N)$  gauge theories. Namely,  $N$  parallel D5-branes may realize an  $SU(N)$  gauge group.
- When we introduce an orientifold 5-plane, we may also realize a  $USp(2N)$  or an  $SO(N)$  gauge group.

Brunner, Karch 97,

Brandhuber, Itzhaki, Sonnenschein, Theisen, Yankielowicz 97

Zafir 15

- Then a natural question is:

“Can we construct exceptional gauge groups from 5-brane webs?”

- In this talk, we propose two types of 5-brane web configurations which realize 5d pure  $G_2$  gauge theory.
- Surprisingly, a standard 5-brane web diagram with an  $O5$ - or  $\widetilde{O5}$ -plane gives rise to the pure  $G_2$  gauge theory.
- The 5-brane web realization can be applied in various ways and we will focus on two applications.

- Recently, a duality involving a  $G_2$  gauge theory has been proposed from a geometric construction.

Jefferson, Katz, Kim, Vafa 18

$$\text{Pure } G_2 \quad \longleftrightarrow \quad \text{SU}(3) \text{ with Chern-Simons level } 7$$

- The duality may be also seen from the 5-brane web construction.
- We can also calculate the Nekrasov partition function of the pure  $G_2$  gauge theory.

1. Introduction
2. 5d gauge theories from 5-brane webs
3. A 5-brane web for pure  $G_2$  gauge theory
4. Another realization of  $G_2$
5. Conclusion

## 2. 5d gauge theories from 5-brane webs

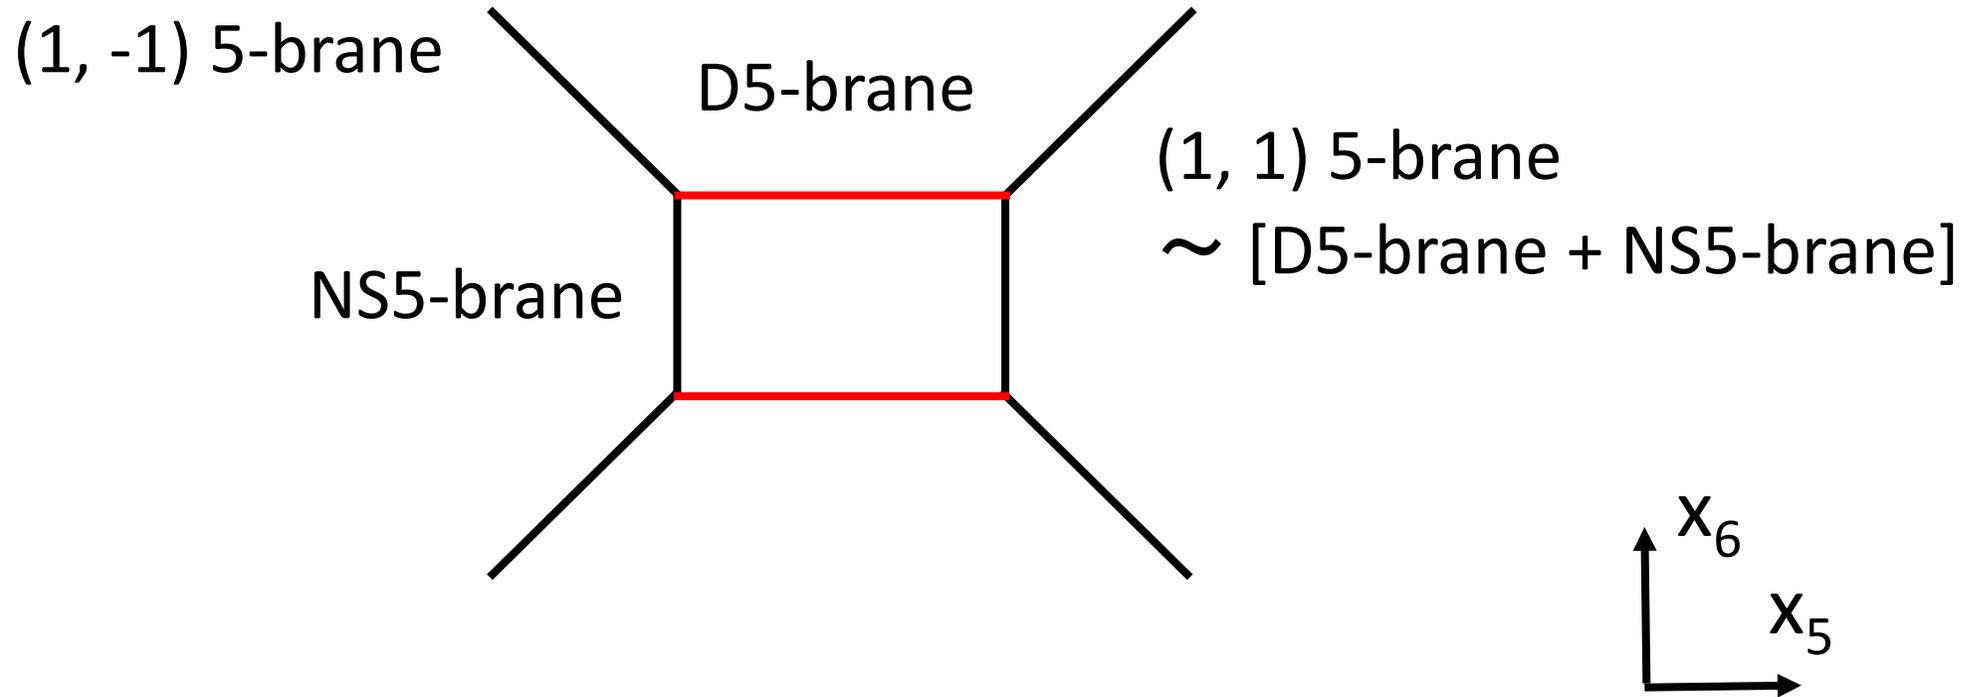

- We construct a 5d supersymmetric field theory with eight supercharges as the worldvolume theory on a 5-brane web.
- The 5-brane configuration in type IIB string theory.

|                  | 0 | 1 | 2 | 3 | 4 | 5     | 6 | 7 | 8 | 9 |
|------------------|---|---|---|---|---|-------|---|---|---|---|

5-brane web

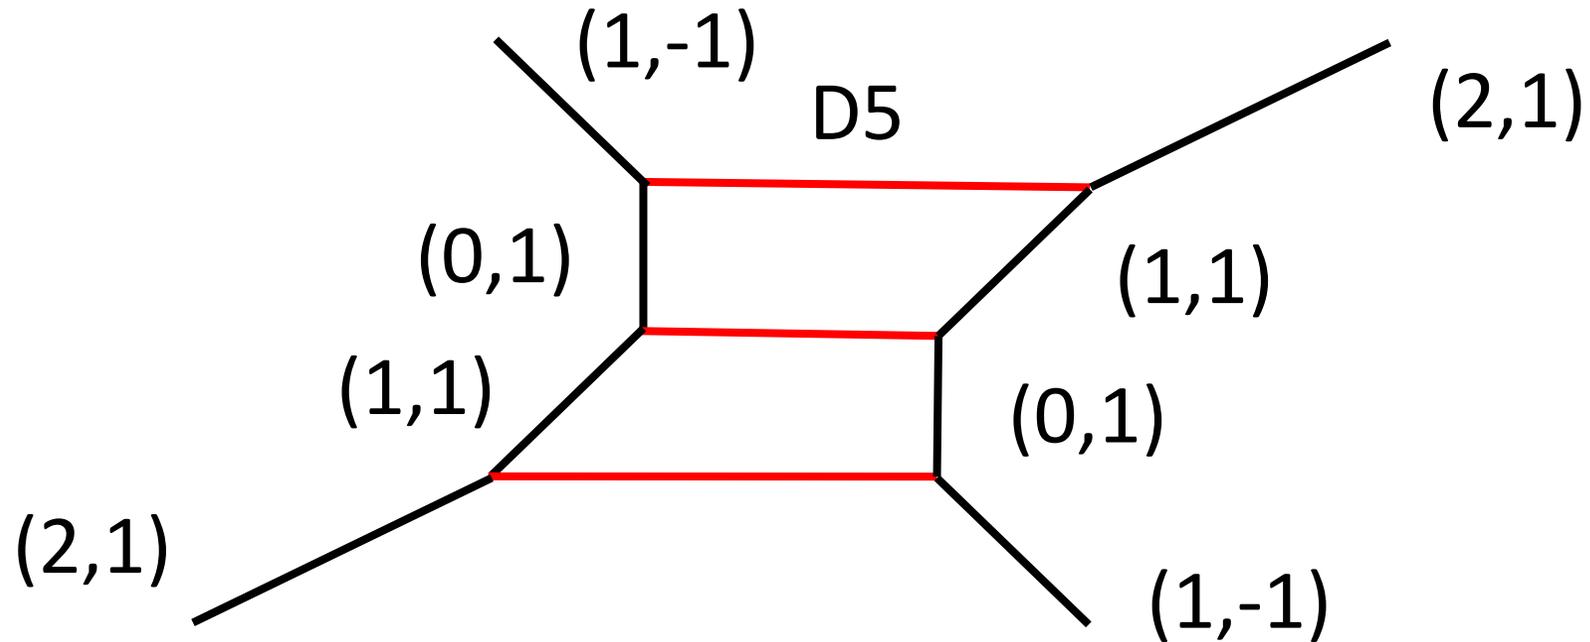

- 5d pure  $SU(2)$  gauge theory with  $\theta = 0$ :

Aharony, Hanany 97  
 Aharony, Hanany, Kol 97

- A  $(p, q)$  5-brane is a line with slope  $q/p$ .

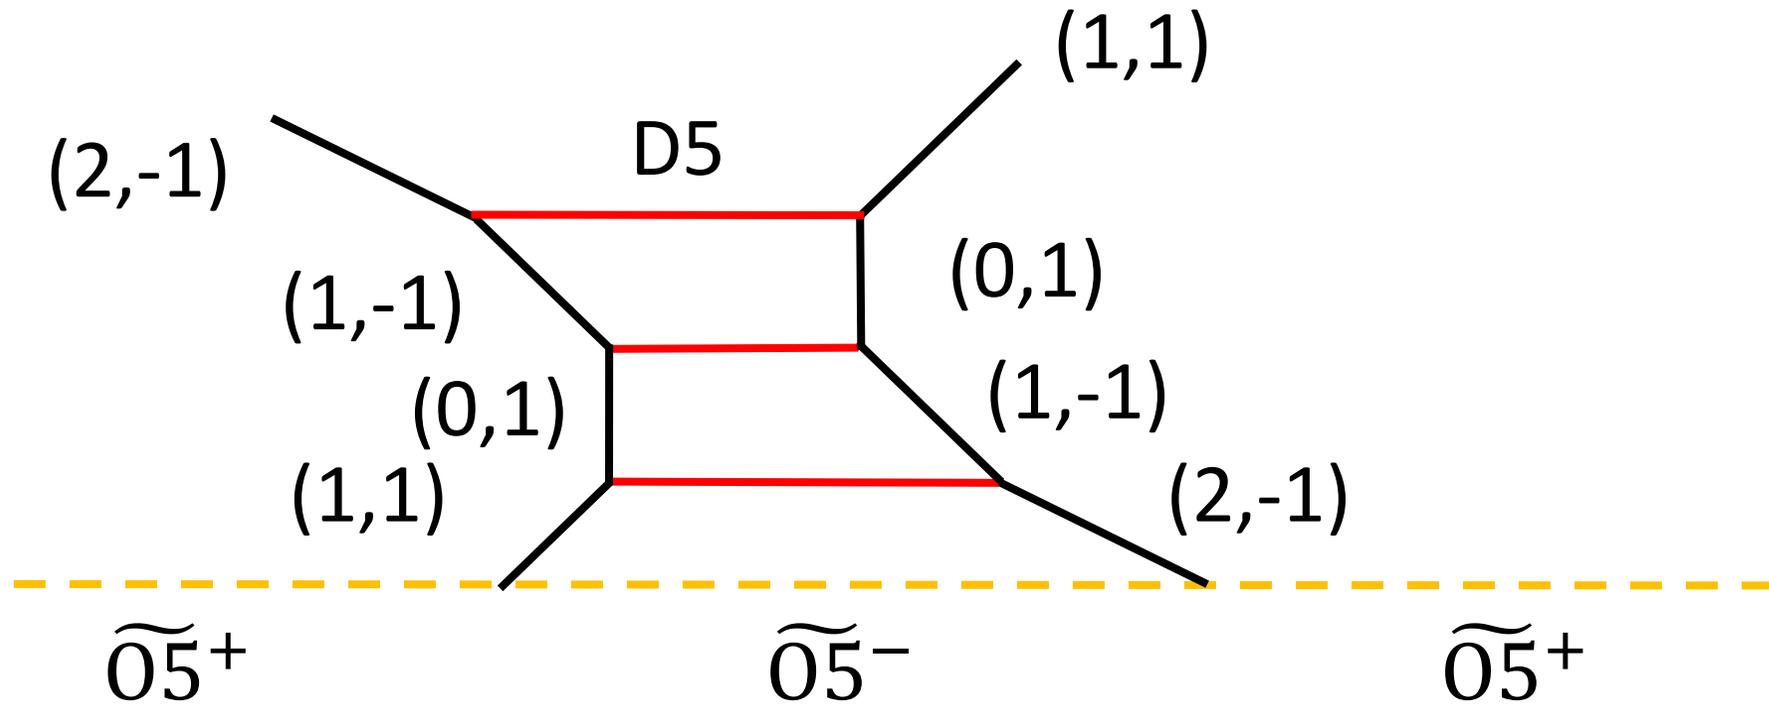

- The web diagram for the SU(3) gauge theory with the zero Chern-Simons level:

- Introducing an orientifold 5-plane may yield a  $USp(2N)$  or an  $SO(N)$  gauge group.

- $N$  D5-branes on an  $O5^+$ - or  $\widetilde{O5}^+$ -plane:  $USp(2N)$
- $N$  D5-branes on an  $O5^-$ -plane:  $SO(2N)$
- $N$  D5-branes on an  $\widetilde{O5}^-$ -plane:  $SO(2N+1)$

- The pure  $SO(7)$  gauge theory:

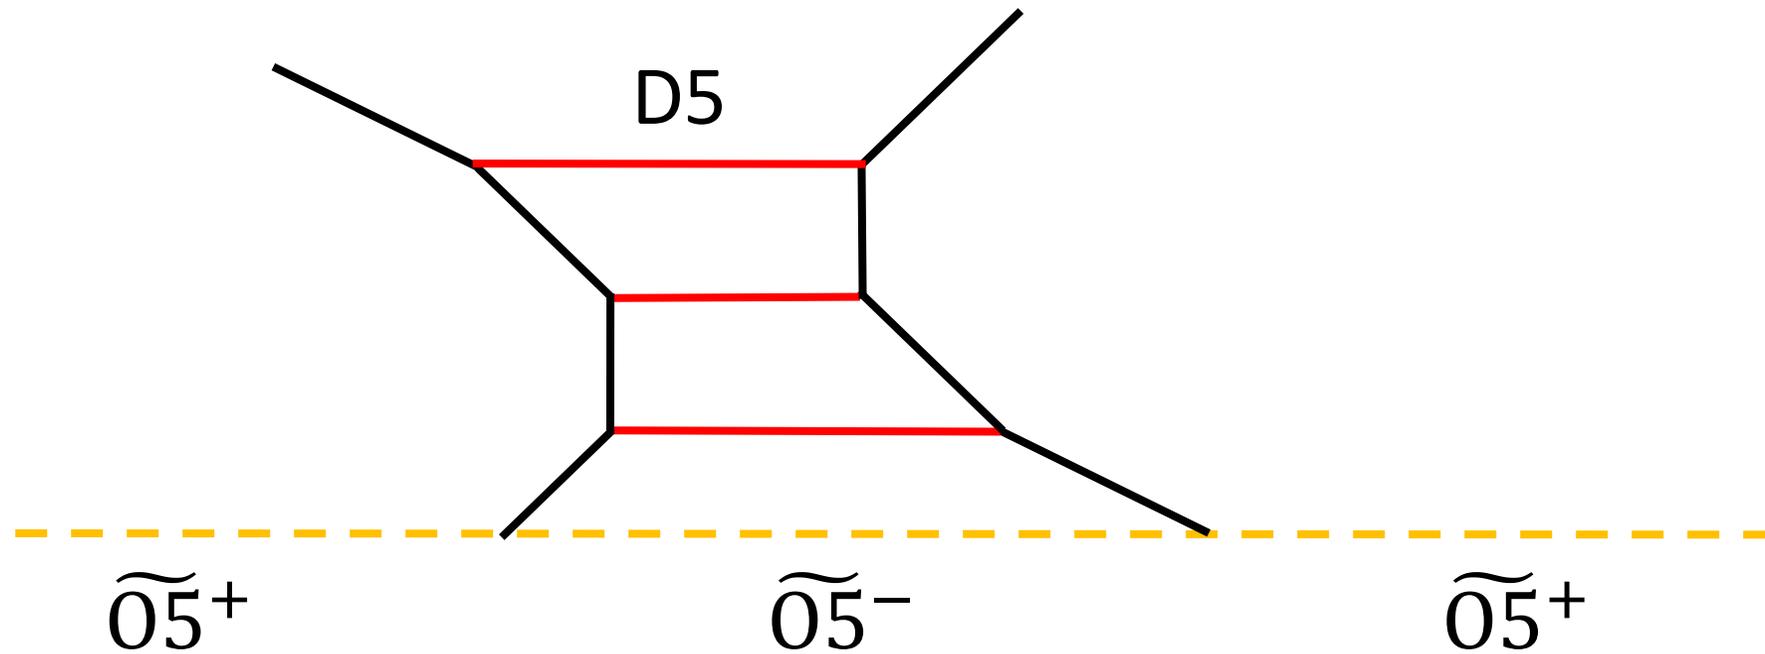

3. A 5-brane web for pure  $G_2$  gauge theory

- We then consider a construction of a 5-brane web diagram for the pure  $G_2$  gauge theory.
- An important fact about  $G_2$  gauge theories is that the pure  $G_2$  gauge theory may be obtained by Higgsing the  $SO(7)$  gauge theory with a hypermultiplet in the spinor representation.

- Hence, we will take the following strategy:
  1. We construct a 5-brane web for the  $SO(7)$  gauge theory with a spinor.
  2. We further Higgs the 5-brane web.
    - ➔ a 5-brane web for the pure  $G_2$  gauge theory

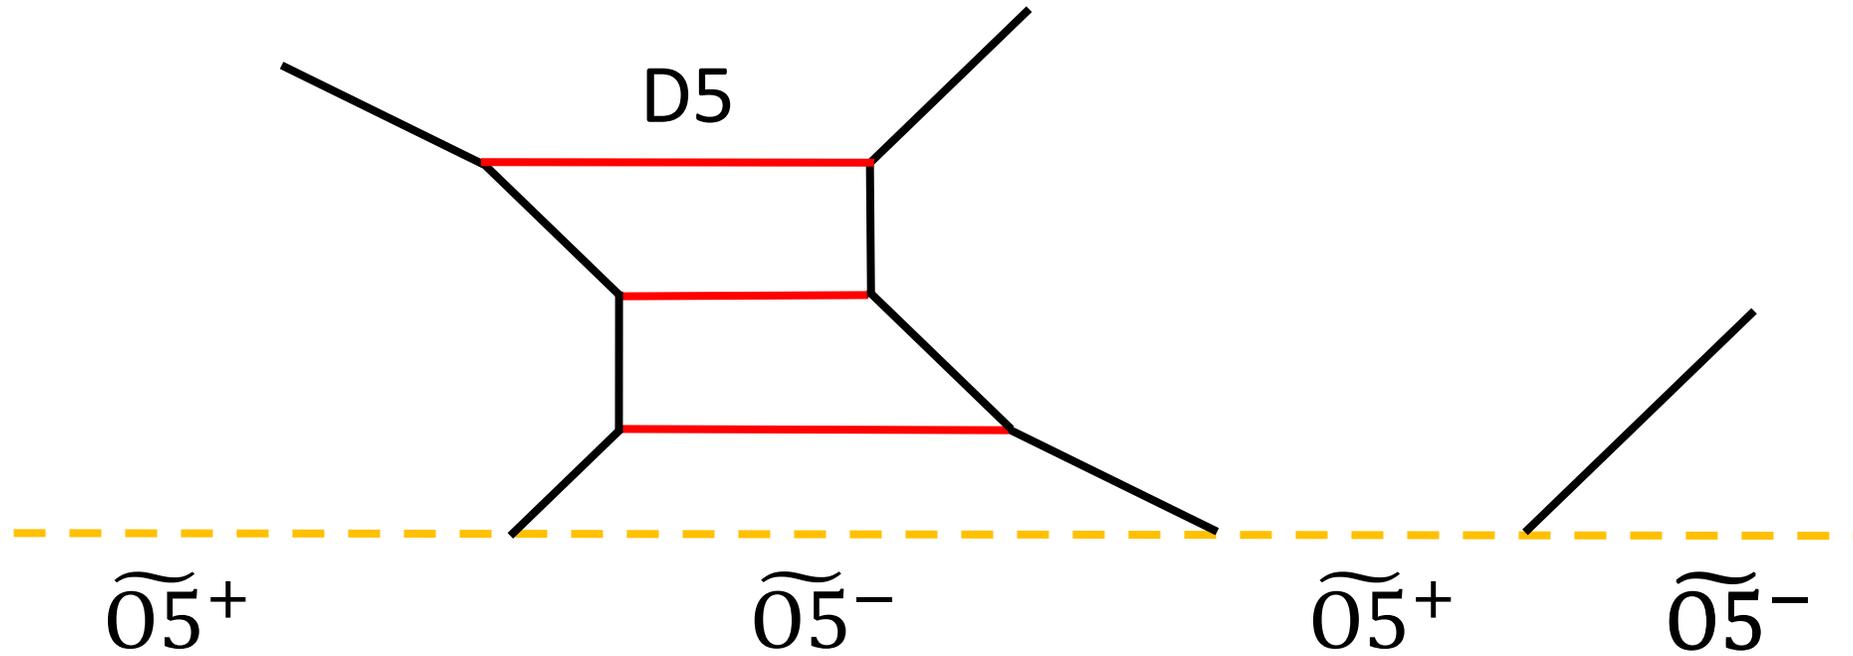

# 1. Incorporating spinor matter :

- The pure  $SO(7)$  gauge theory was given by:

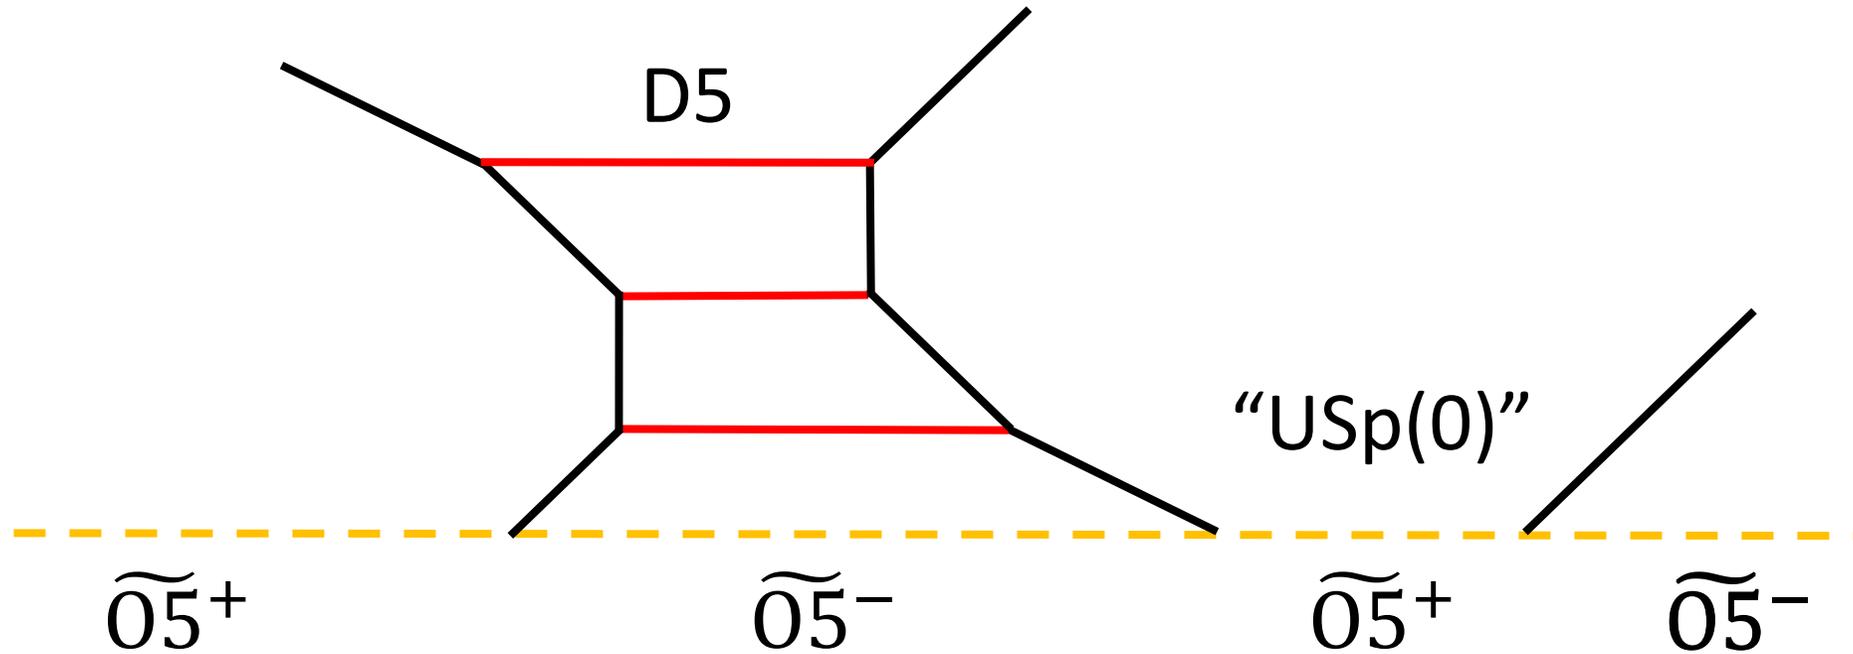

- 5d  $SO(7)$  gauge theory with a spinor:

Zafrir 15

- 5d  $SO(7)$  gauge theory with a spinor:

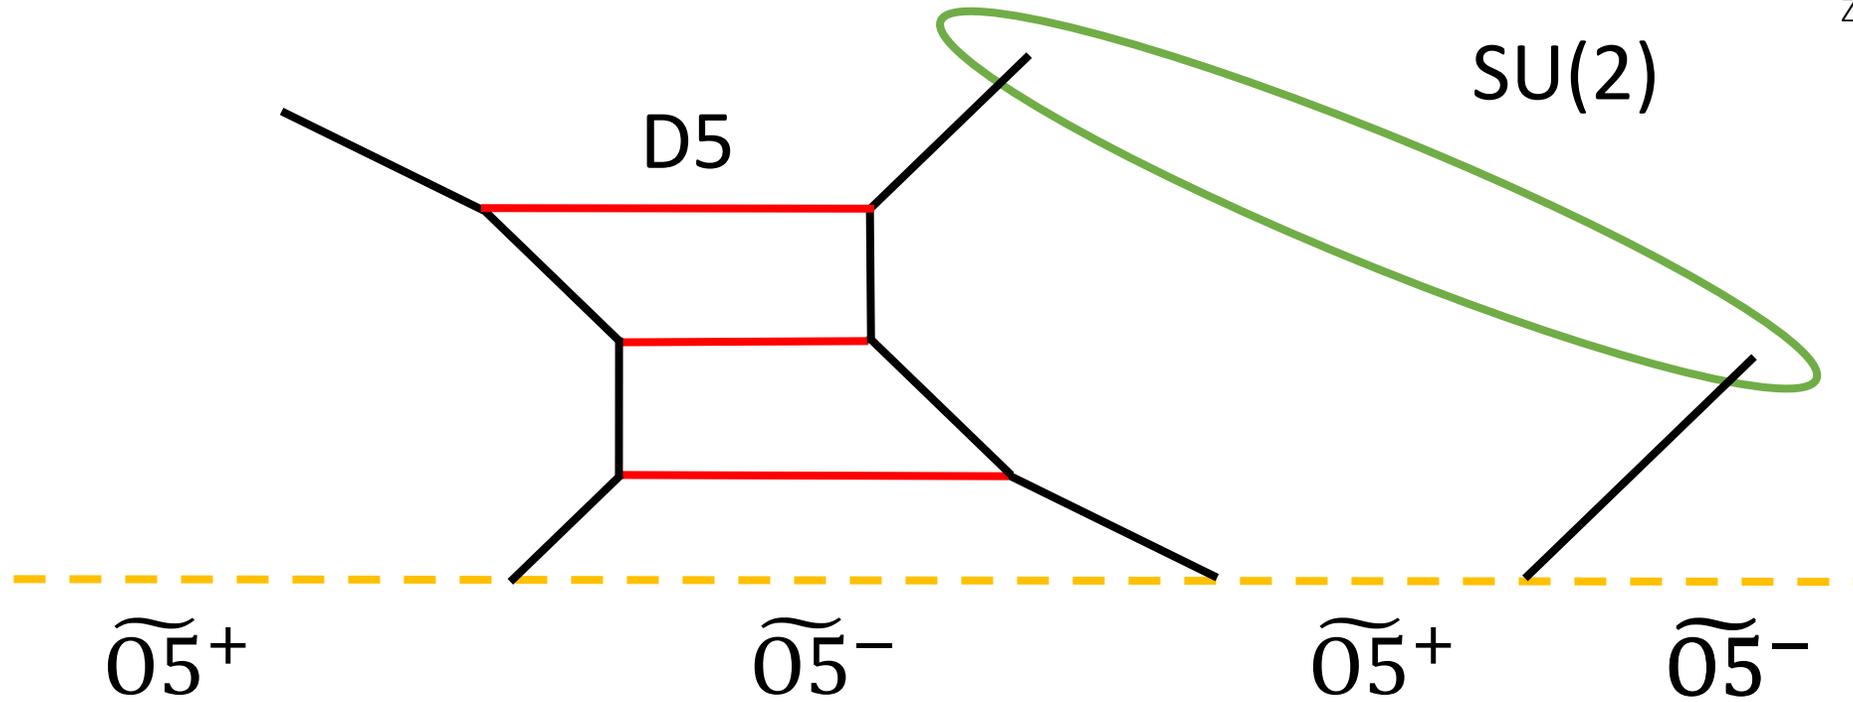

Zafir 15

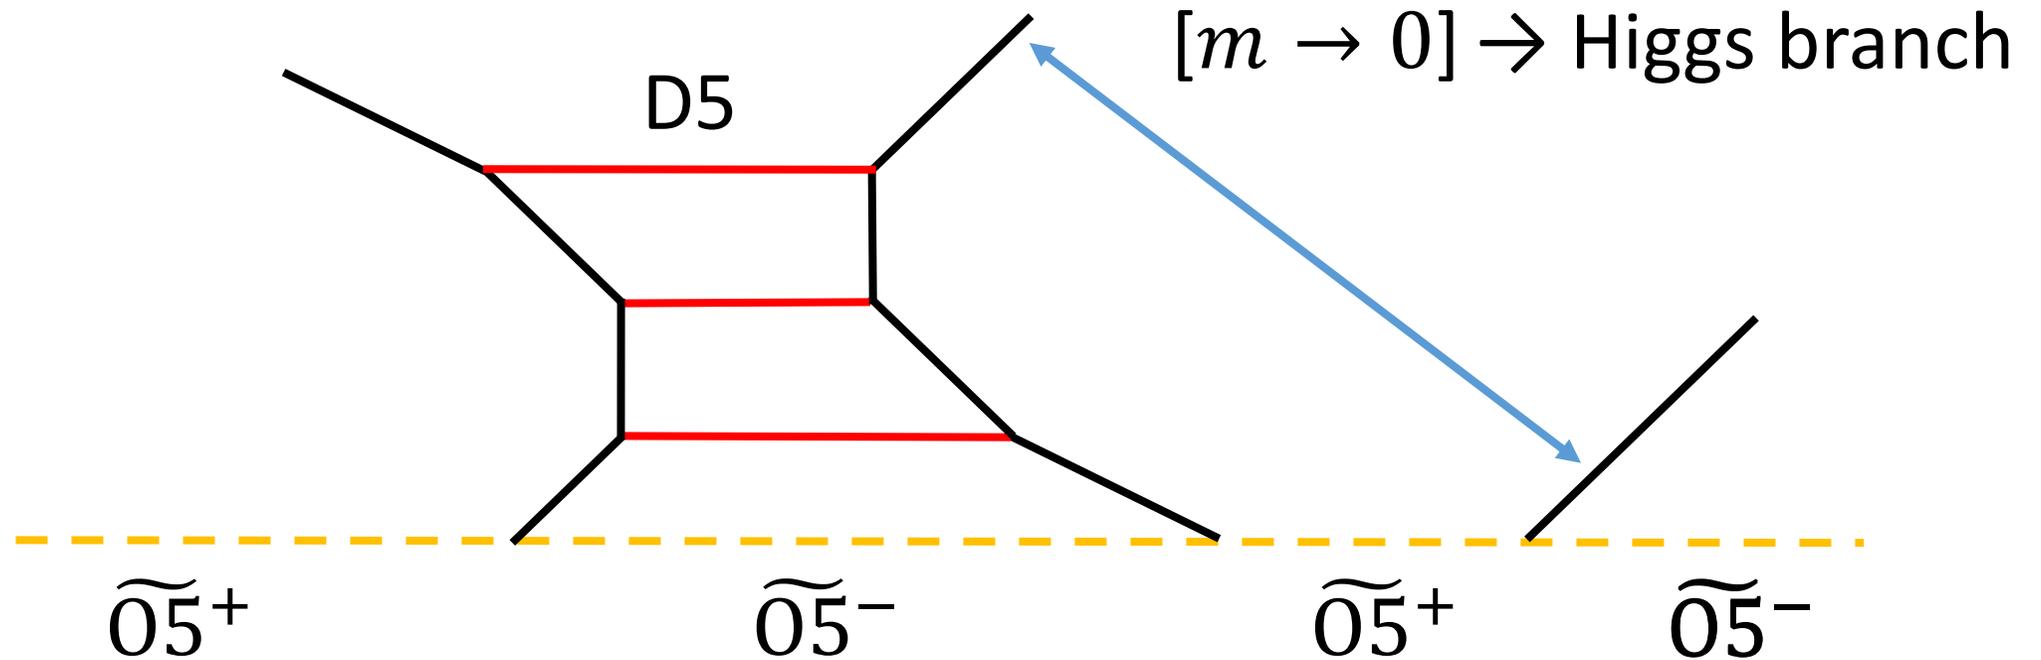

"USp(0) instanton" = spinor matter

- 5d  $SO(7)$  gauge theory with a spinor:

Zafrir 15

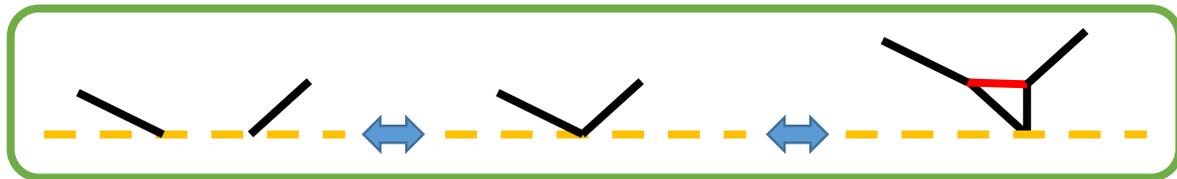

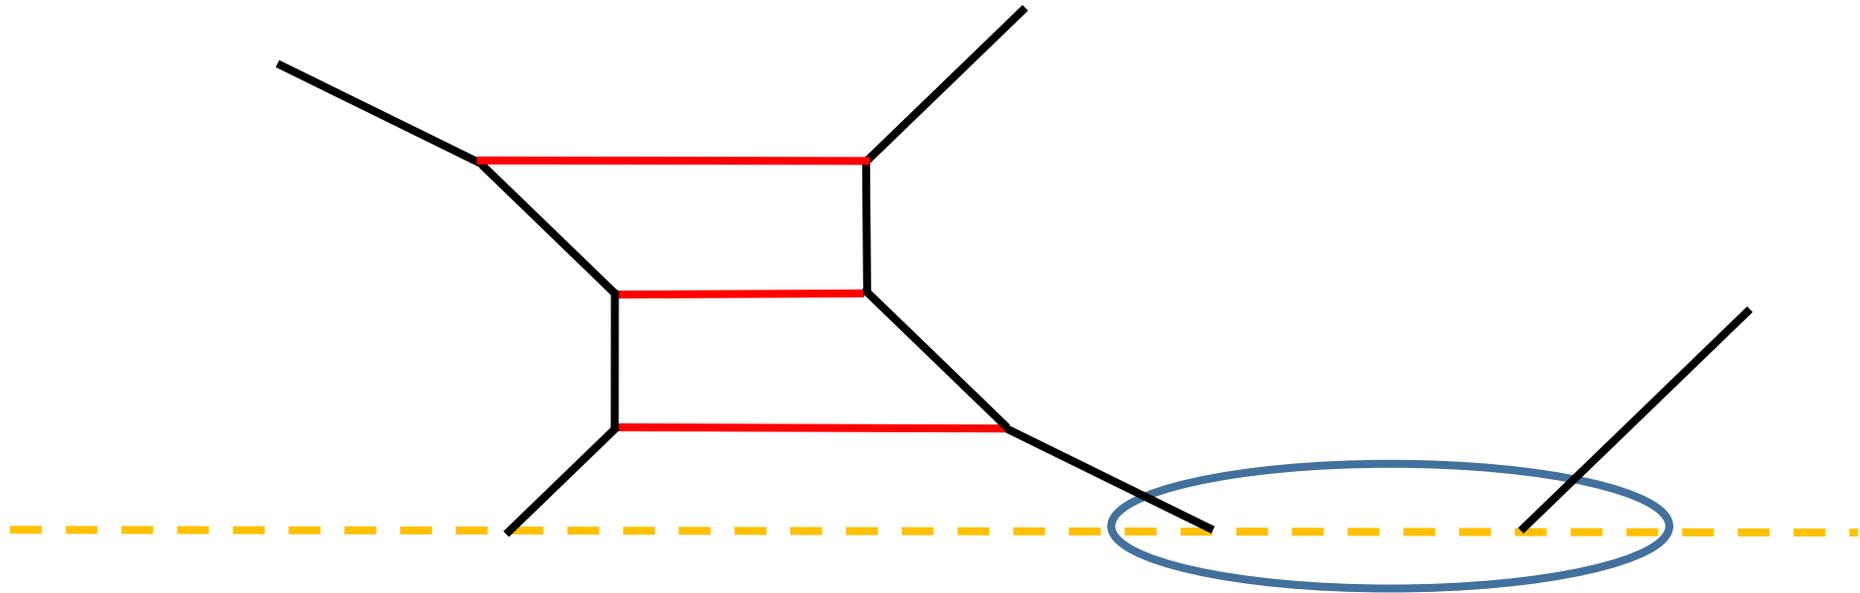

- 5d  $SO(7)$  gauge theory with a spinor:

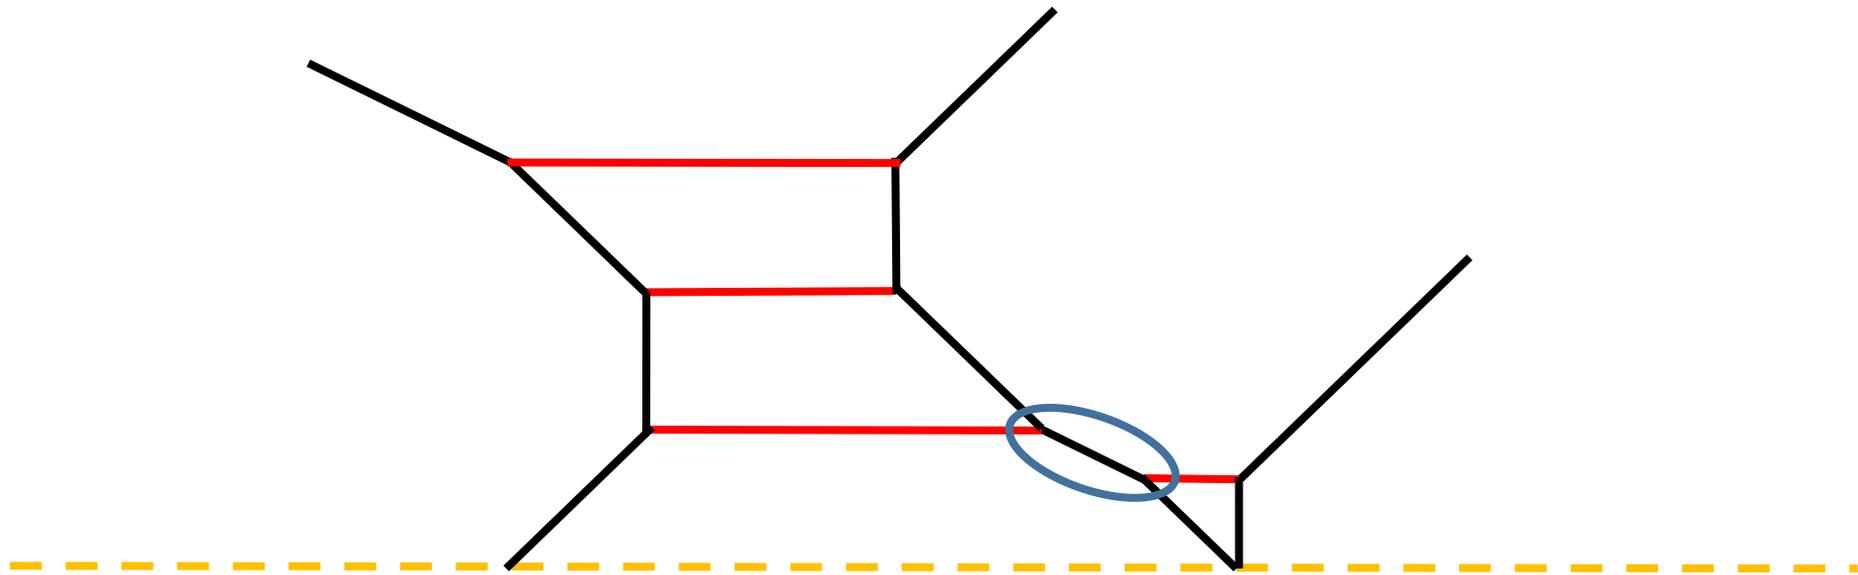

- A Higgsing associated to the  $SU(2)$  yields the pure  $G_2$ .

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

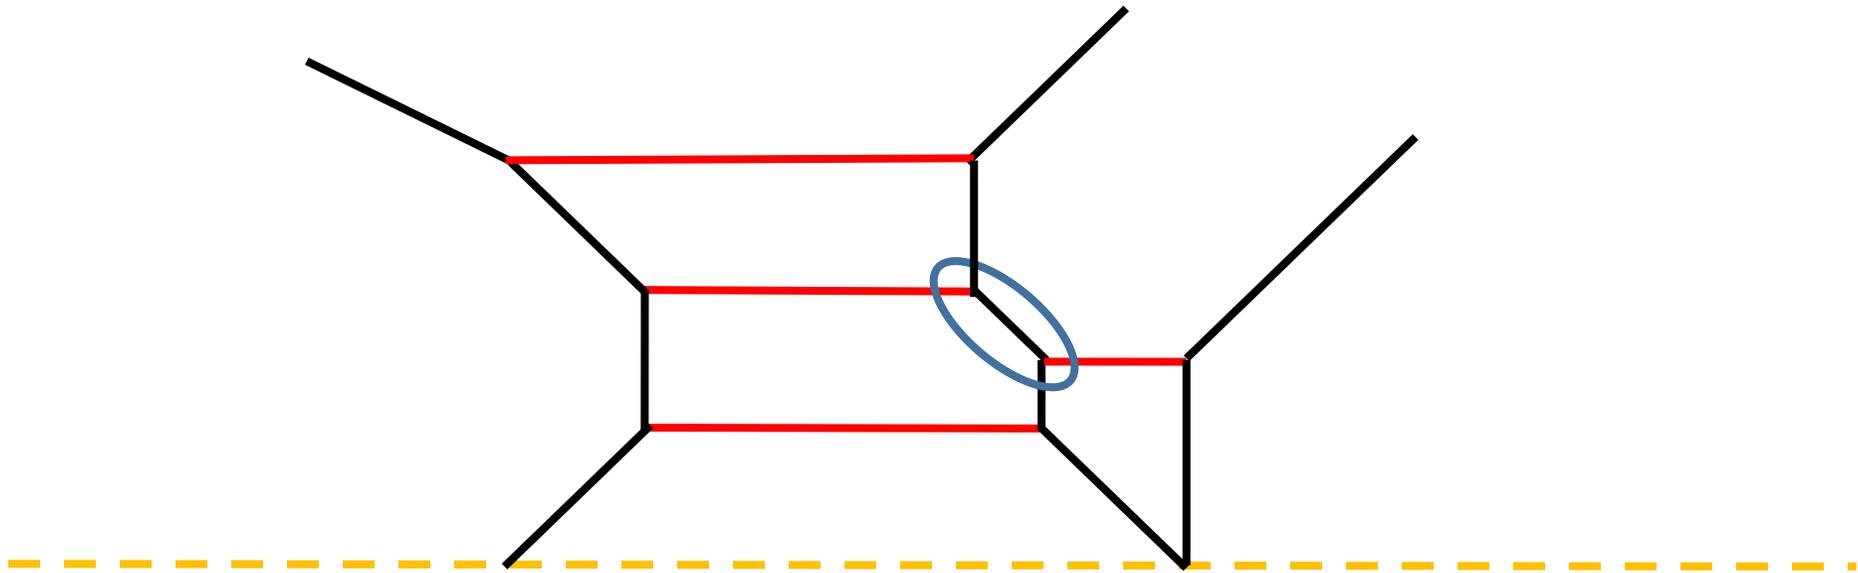

Apply a “flop transition”

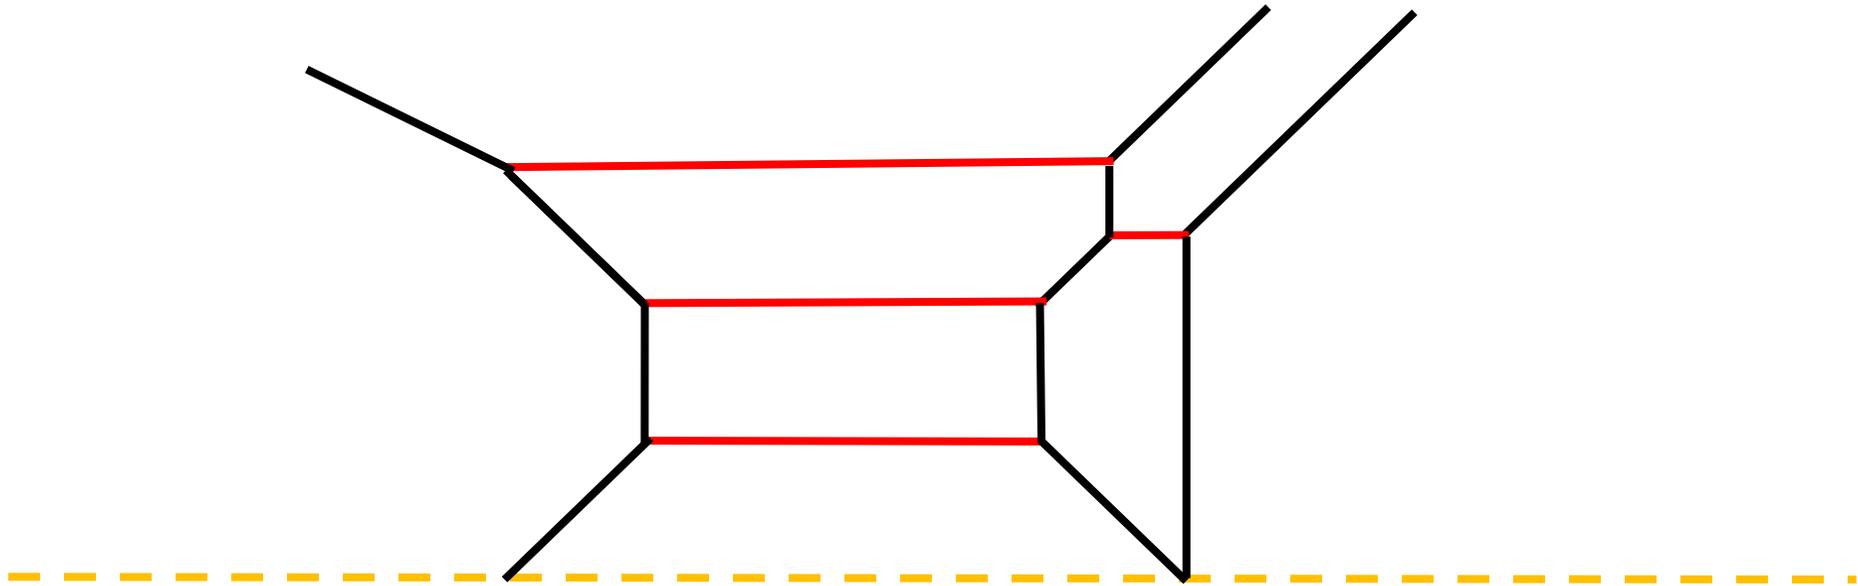

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

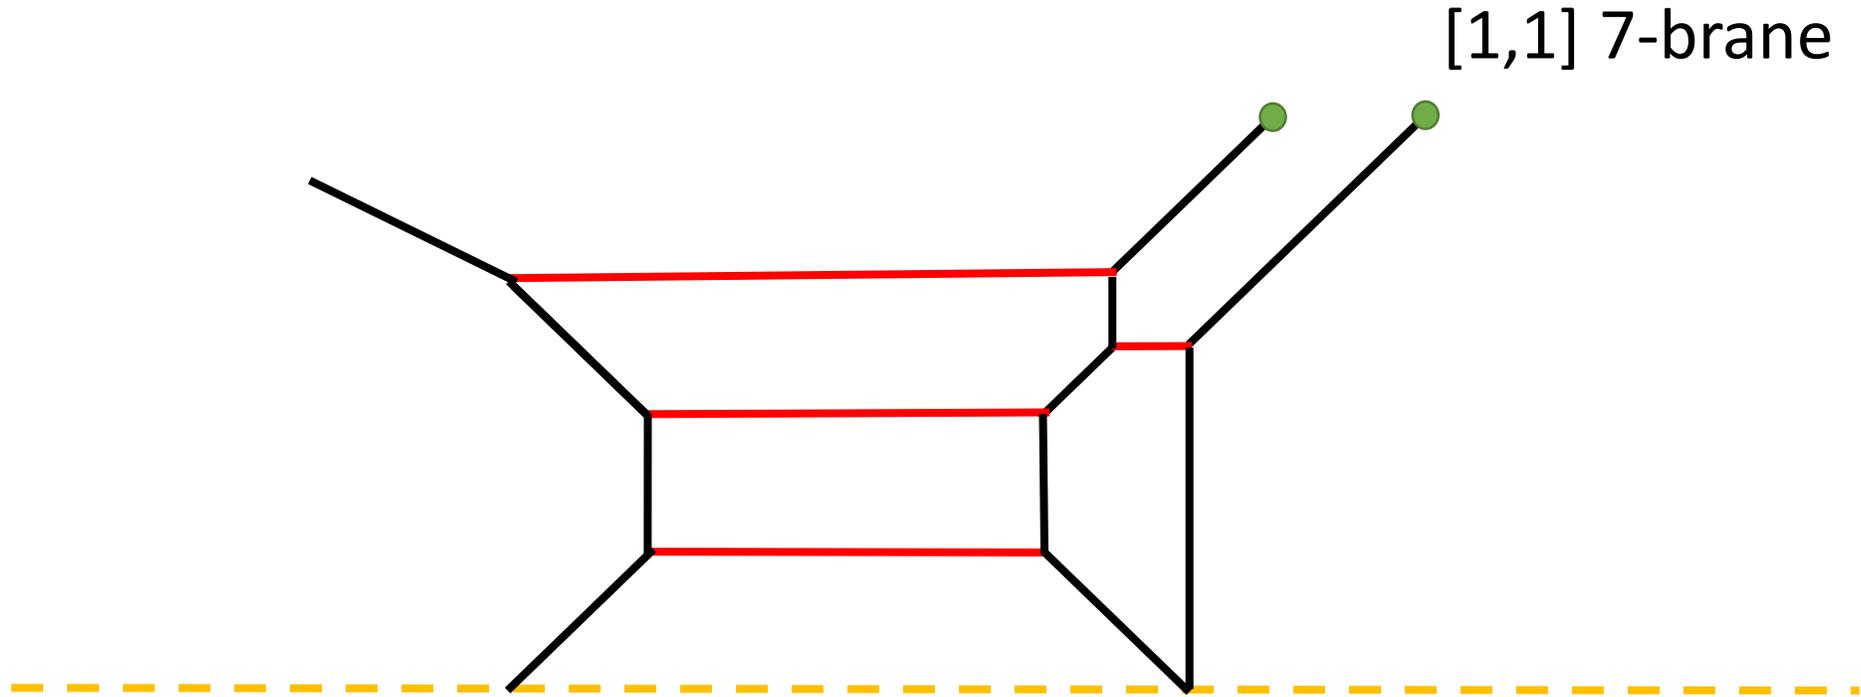

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

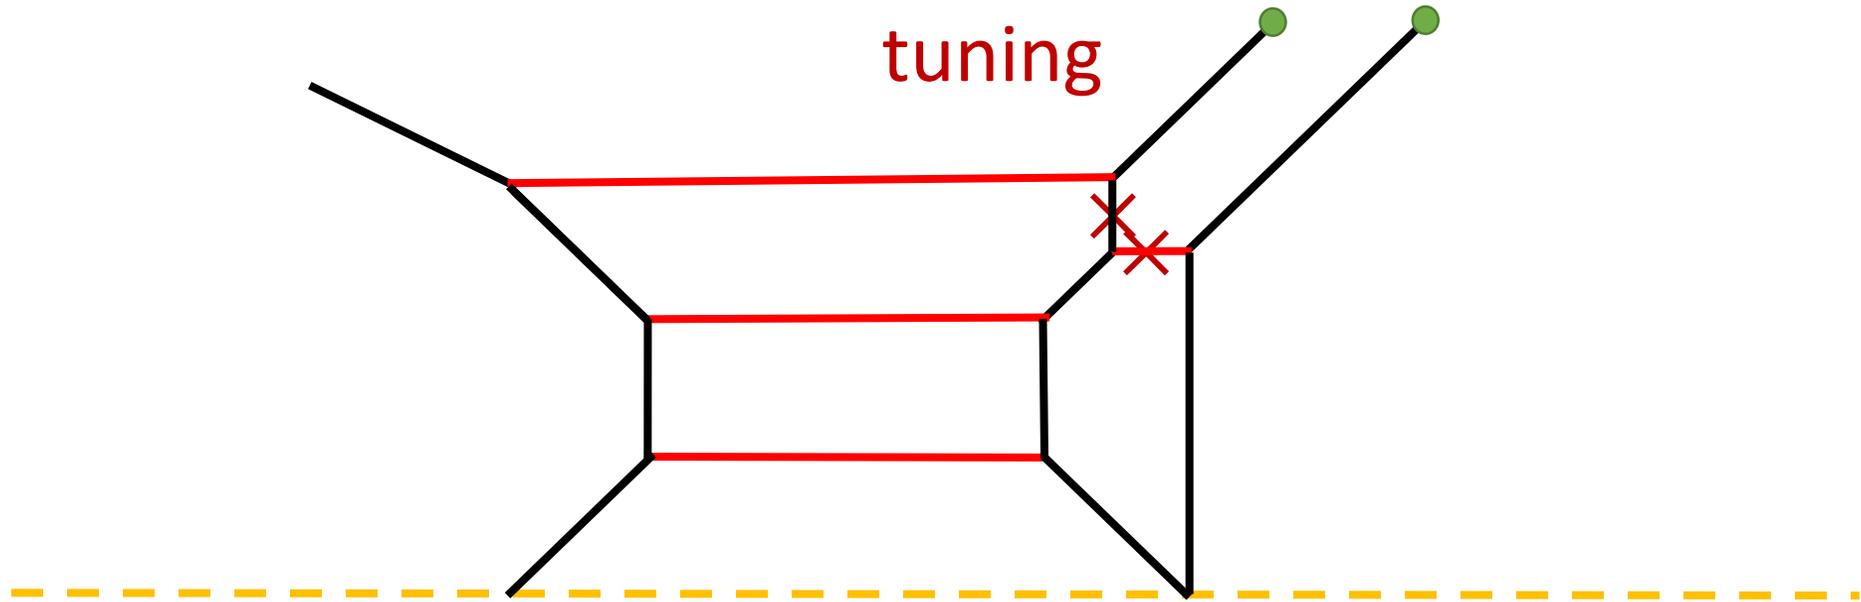

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

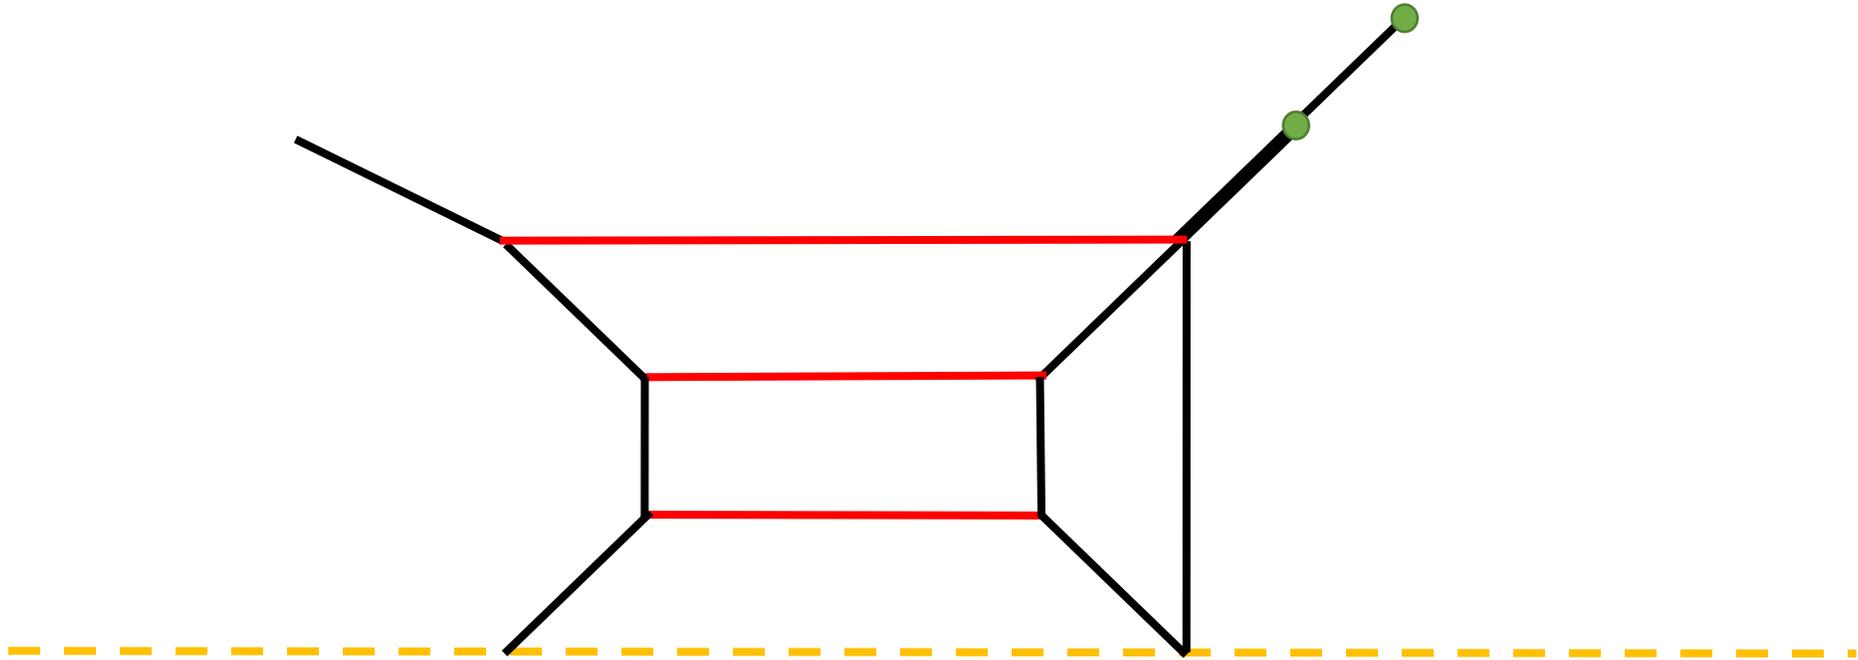

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

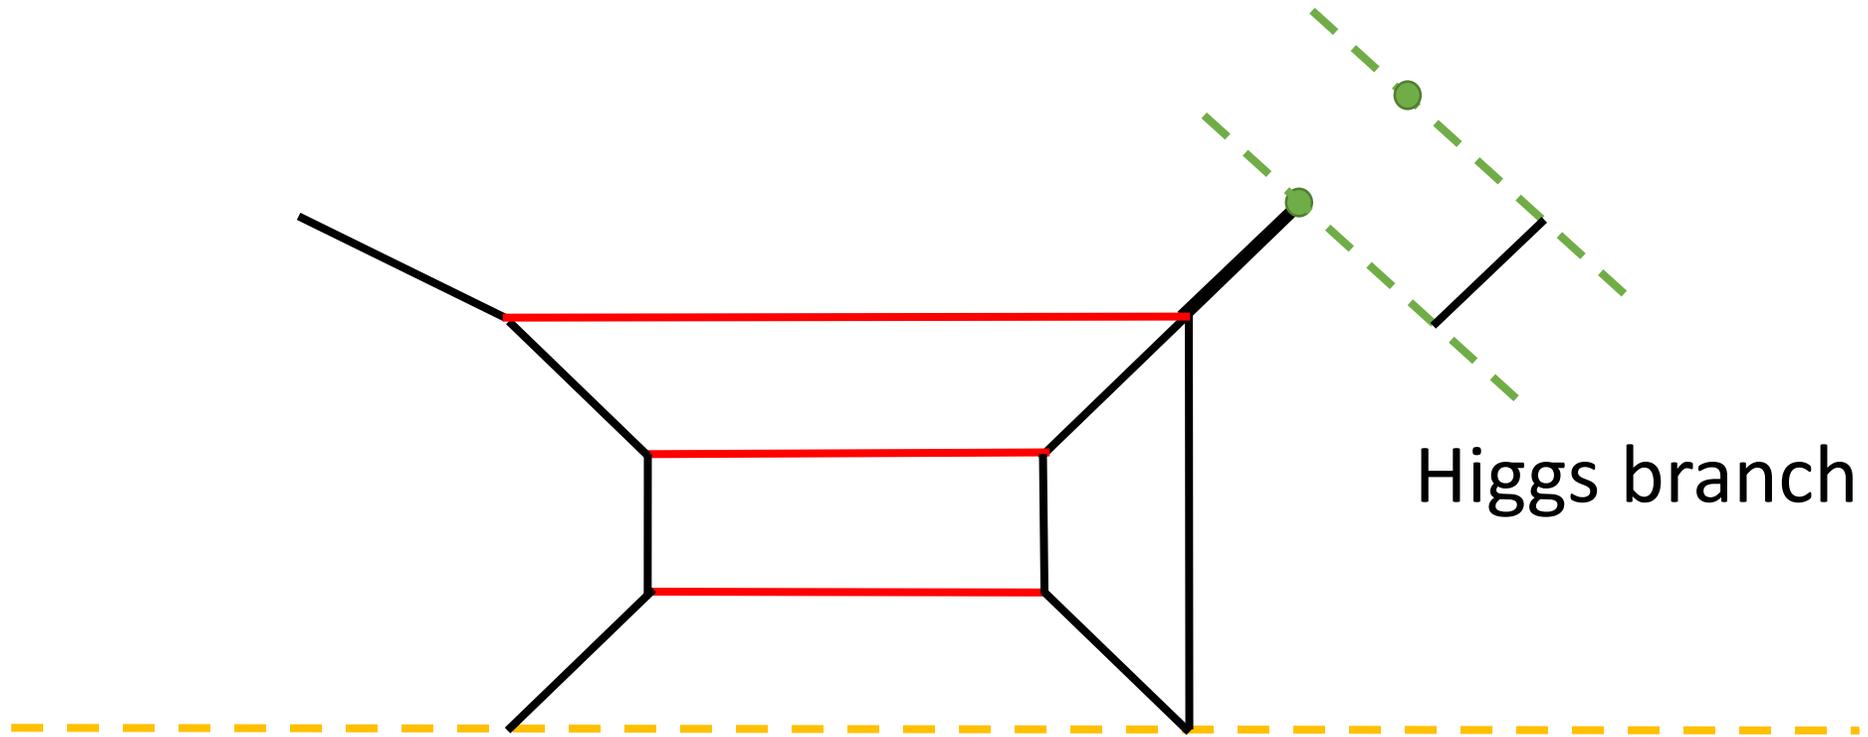

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

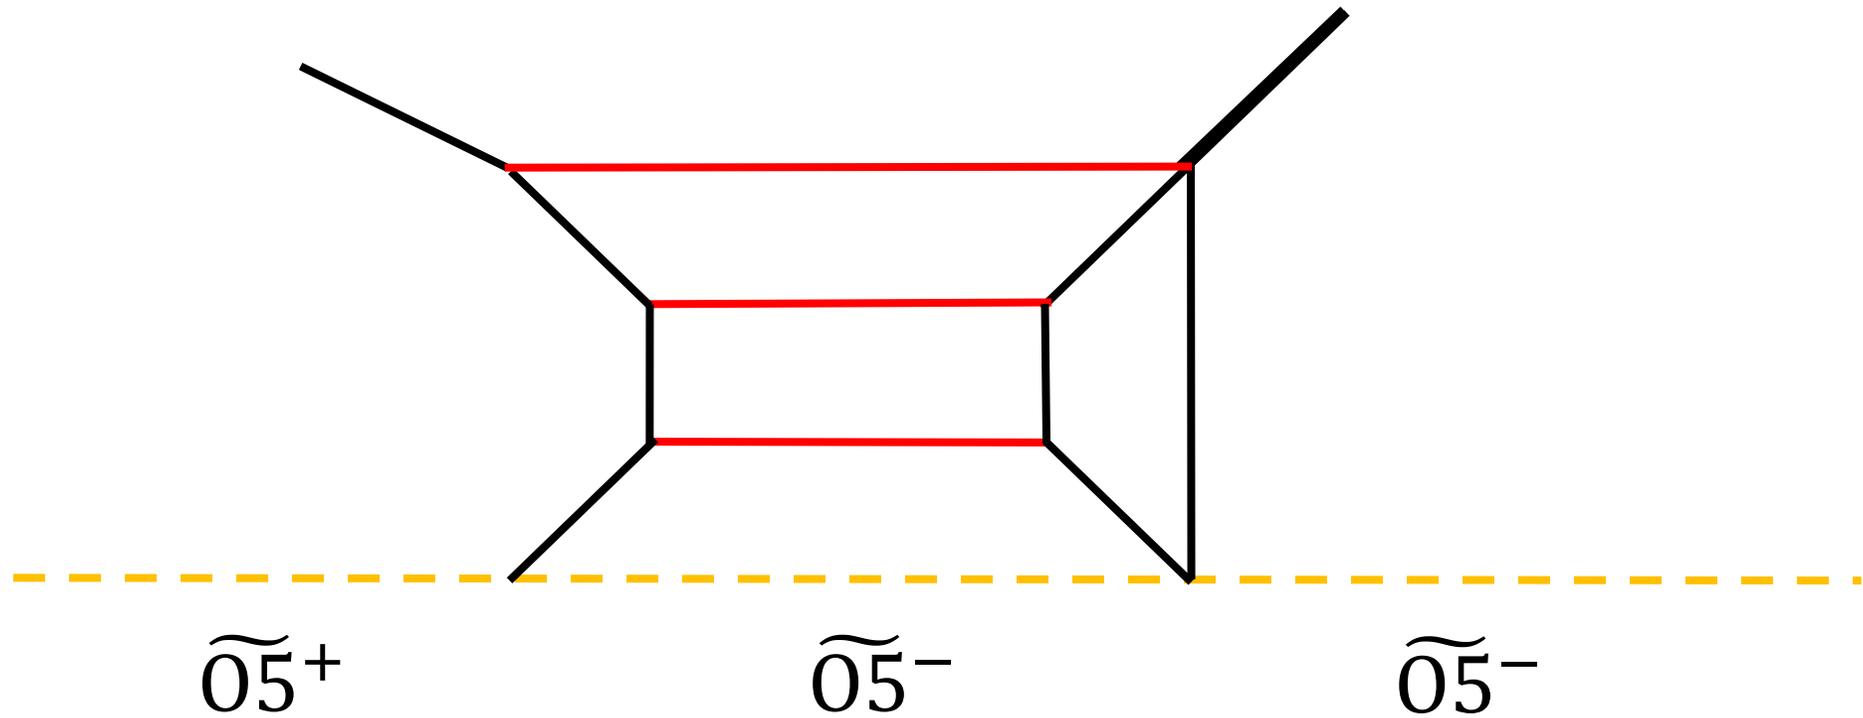

2. Higgsing 5d  $SO(7)$  gauge theory with a spinor:

## 2. Higgsing 5d $SO(7)$ gauge theory with a spinor:

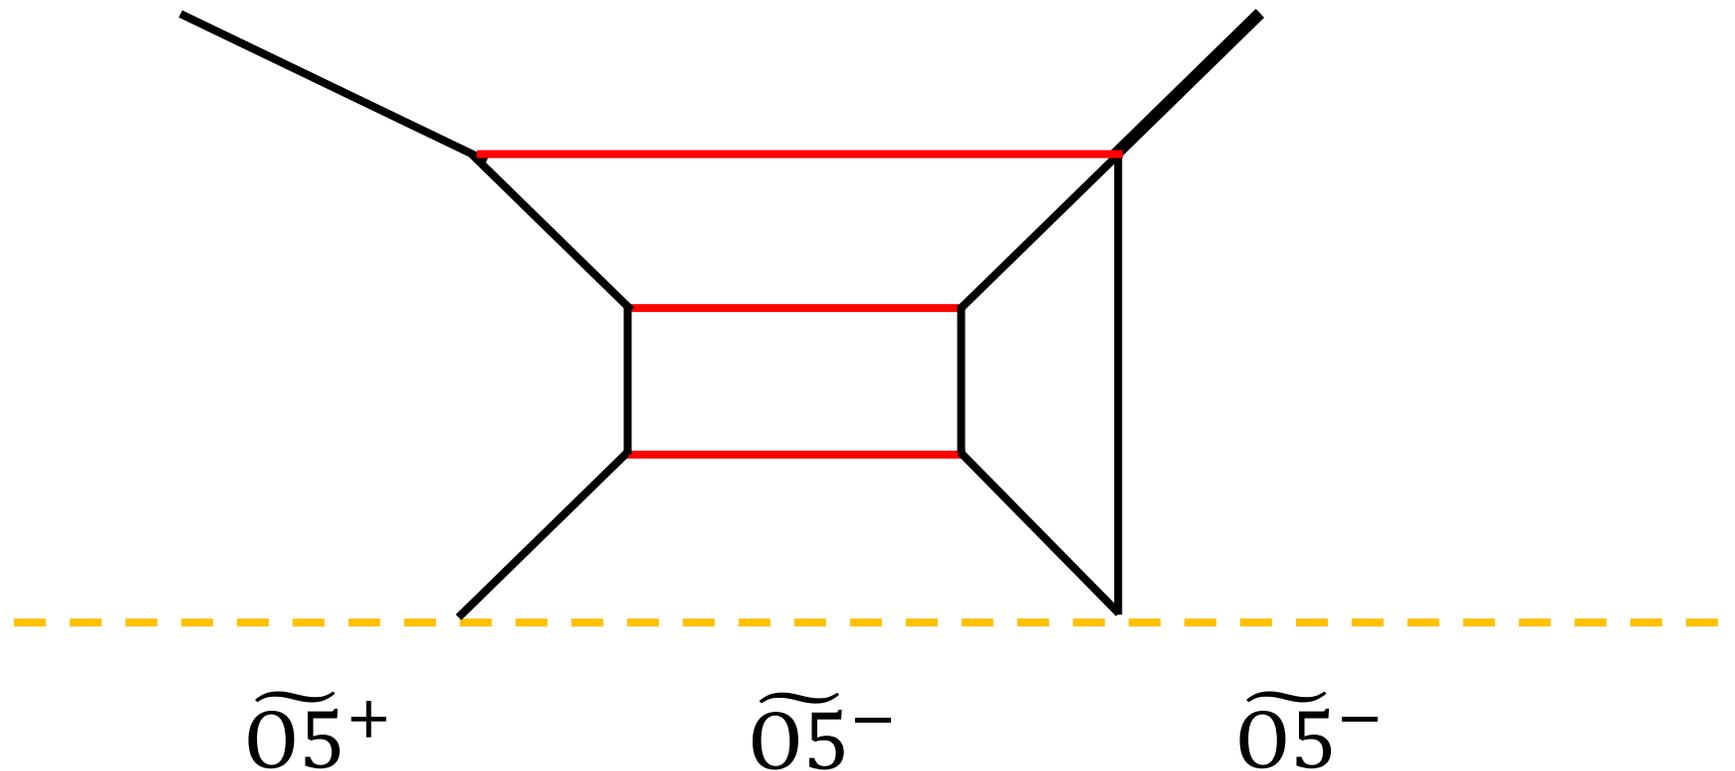

- 5d pure  $G_2$  gauge theory:

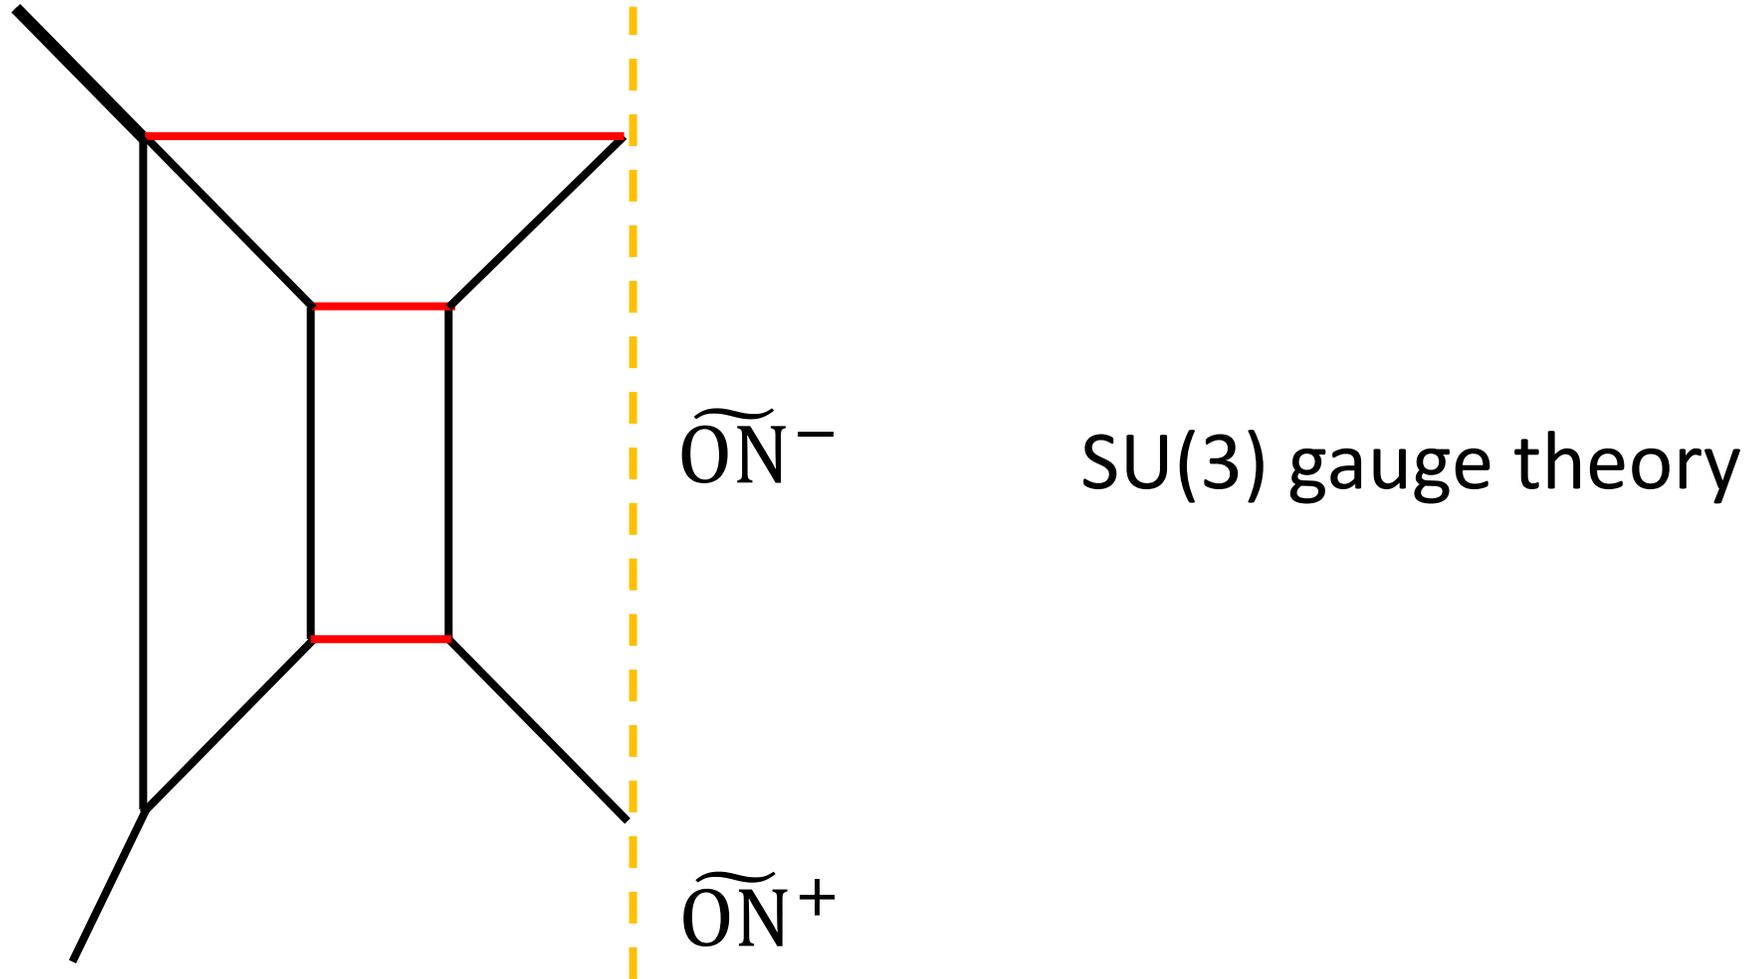

1.  $G_2 \leftrightarrow SU(3)_7$  duality:

Jefferson, Katz, Kim, Vafa 18

- A 5-brane web for the pure  $G_2$  gauge theory:

- S-dual to the 5-brane web for the pure  $G_2$  gauge theory:

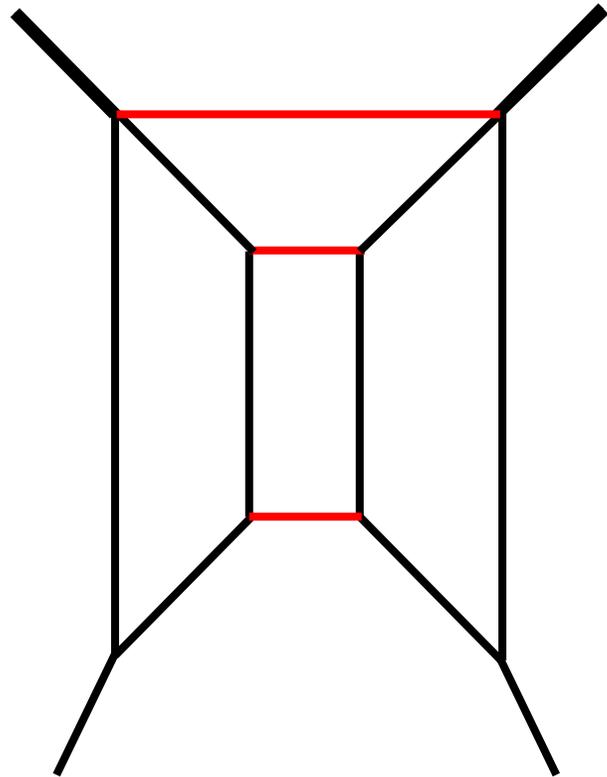

- We can confirm the Chern-Simons level by computing the effective prepotential of the 5d theory.
- Or similarly we can compare the tension of a monopole string given by a derivative of the effective prepotential.
- In the 5-brane web diagram, the monopole string tension is given by the area of a face of the diagram.

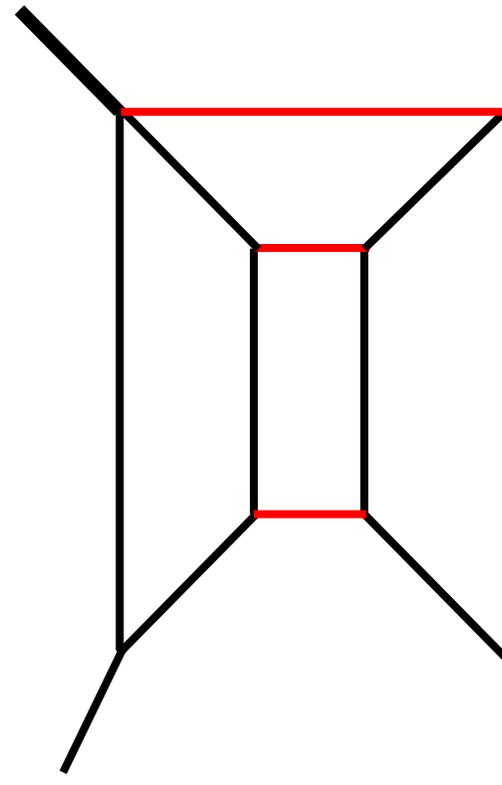

Hanany, Witten 96  
Aharony, Hanany 97  
Aharony, Hanany, Kol 97

- We confirmed that the  $SU(3)$  gauge theory has  $\kappa = 7$ .

- In fact, we can further increase the Chern-Simons level.

$$\kappa = 5$$

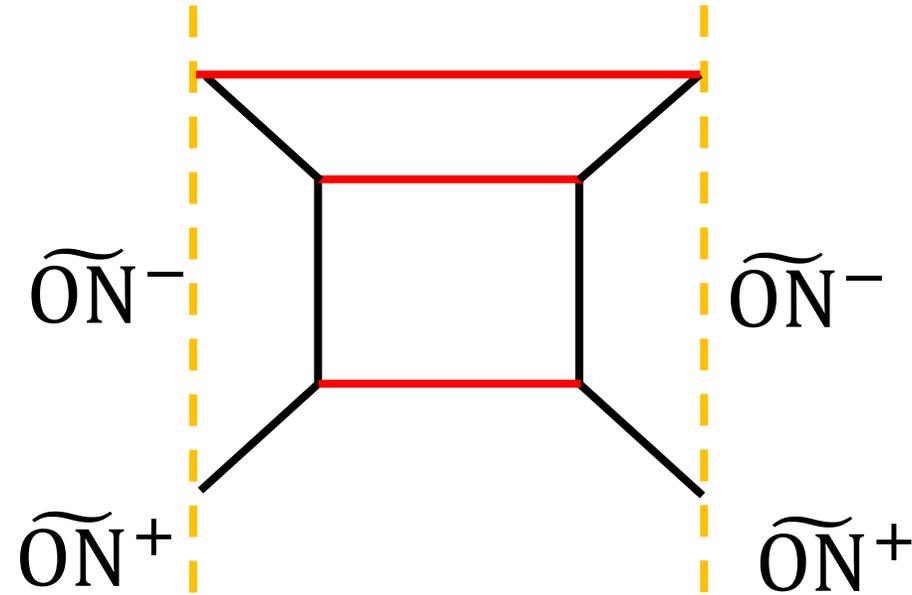

$$\kappa = 7$$

$\widetilde{\mathcal{O}N}^-$

$\widetilde{\mathcal{O}N}^+$

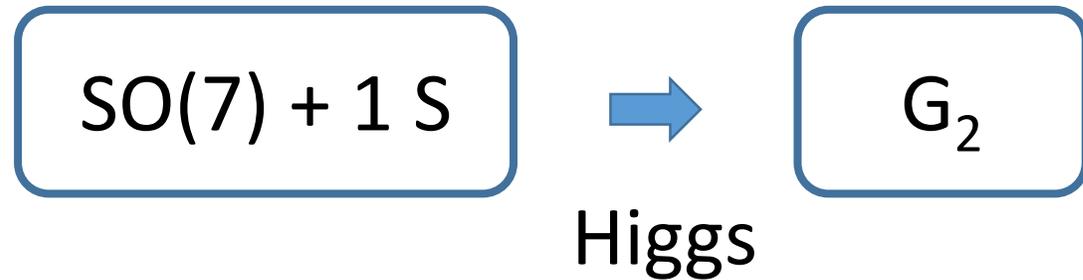

- A 5-brane web diagram of the  $SU(3)$  gauge theory with Chern-Simons level 9.

- The  $SU(3)_9$  theory has been also constructed from geometry.

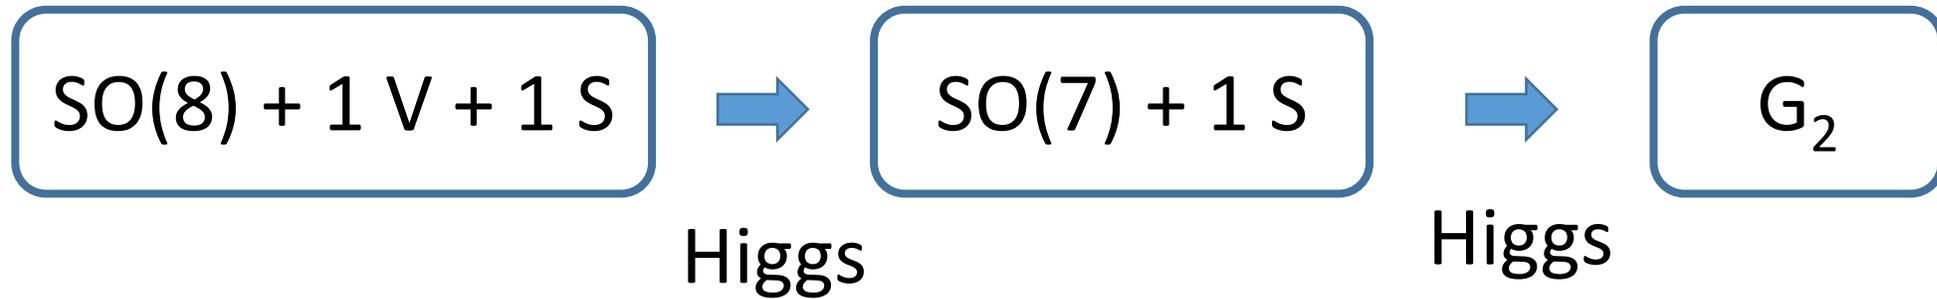

## 4. Another realization of $G_2$

- In fact, there is another way to obtain a 5-brane web for the pure  $G_2$  gauge theory.
- What we have done:

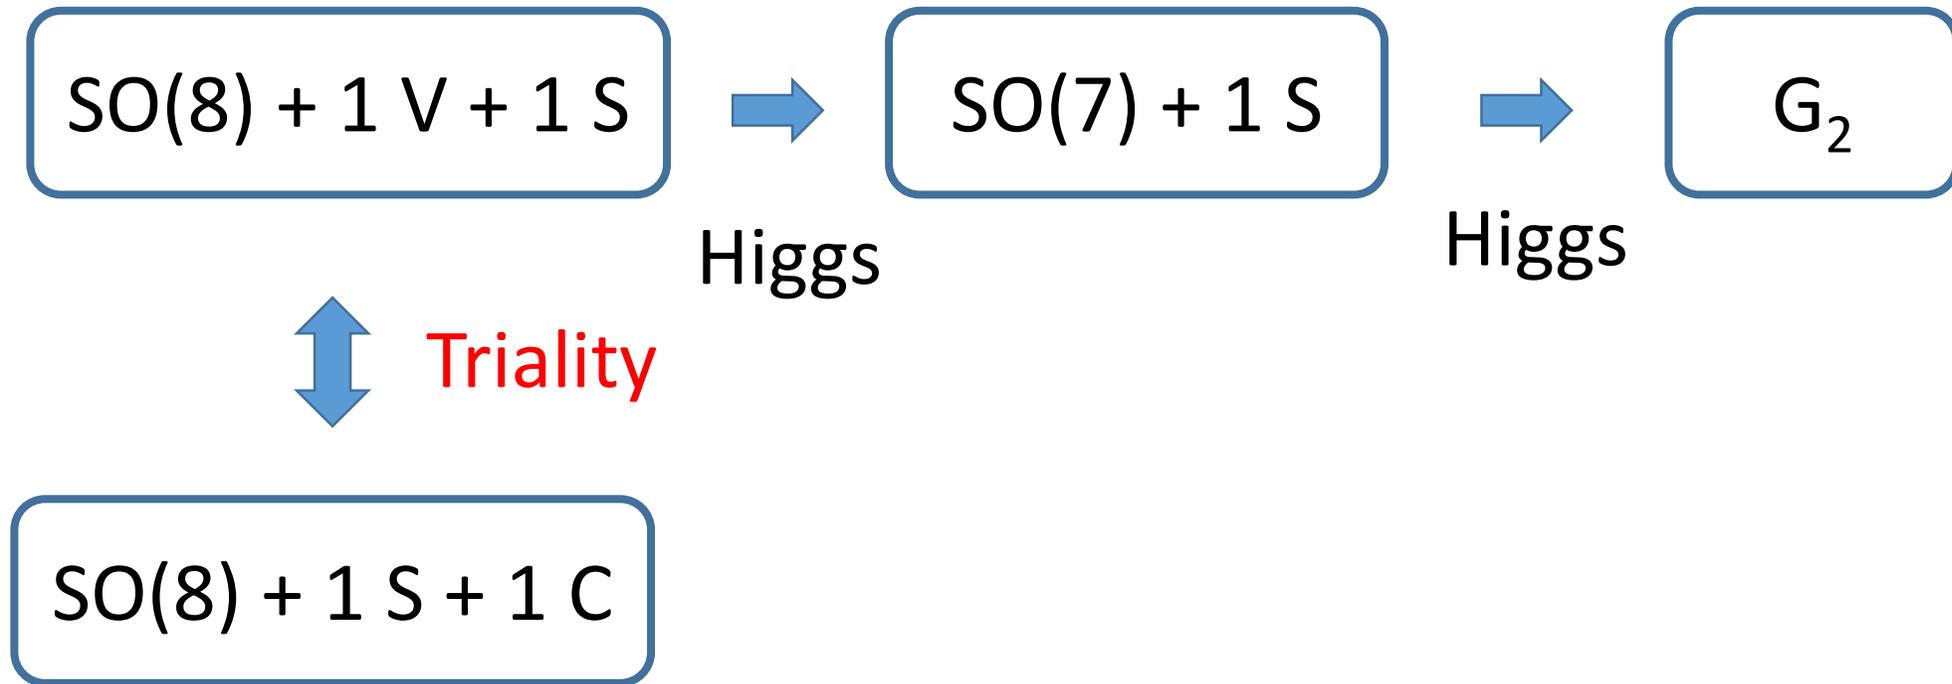

- In fact, there is another way to obtain a 5-brane web for the pure  $G_2$  gauge theory.

- What we have done:

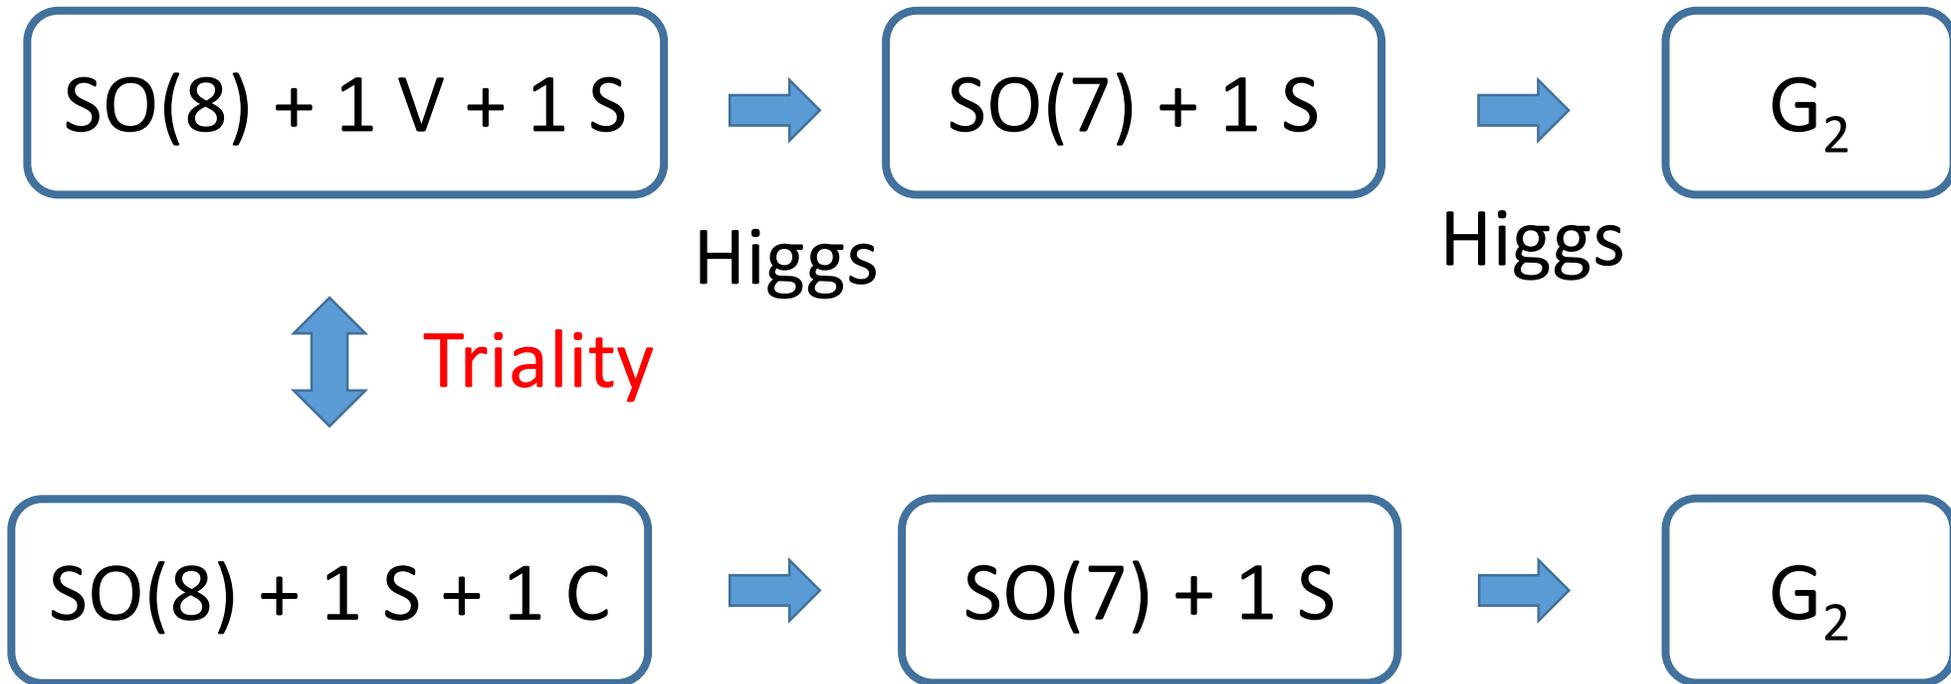

- In fact, there is another way to obtain a 5-brane web for the pure  $G_2$  gauge theory.

- What we have done:

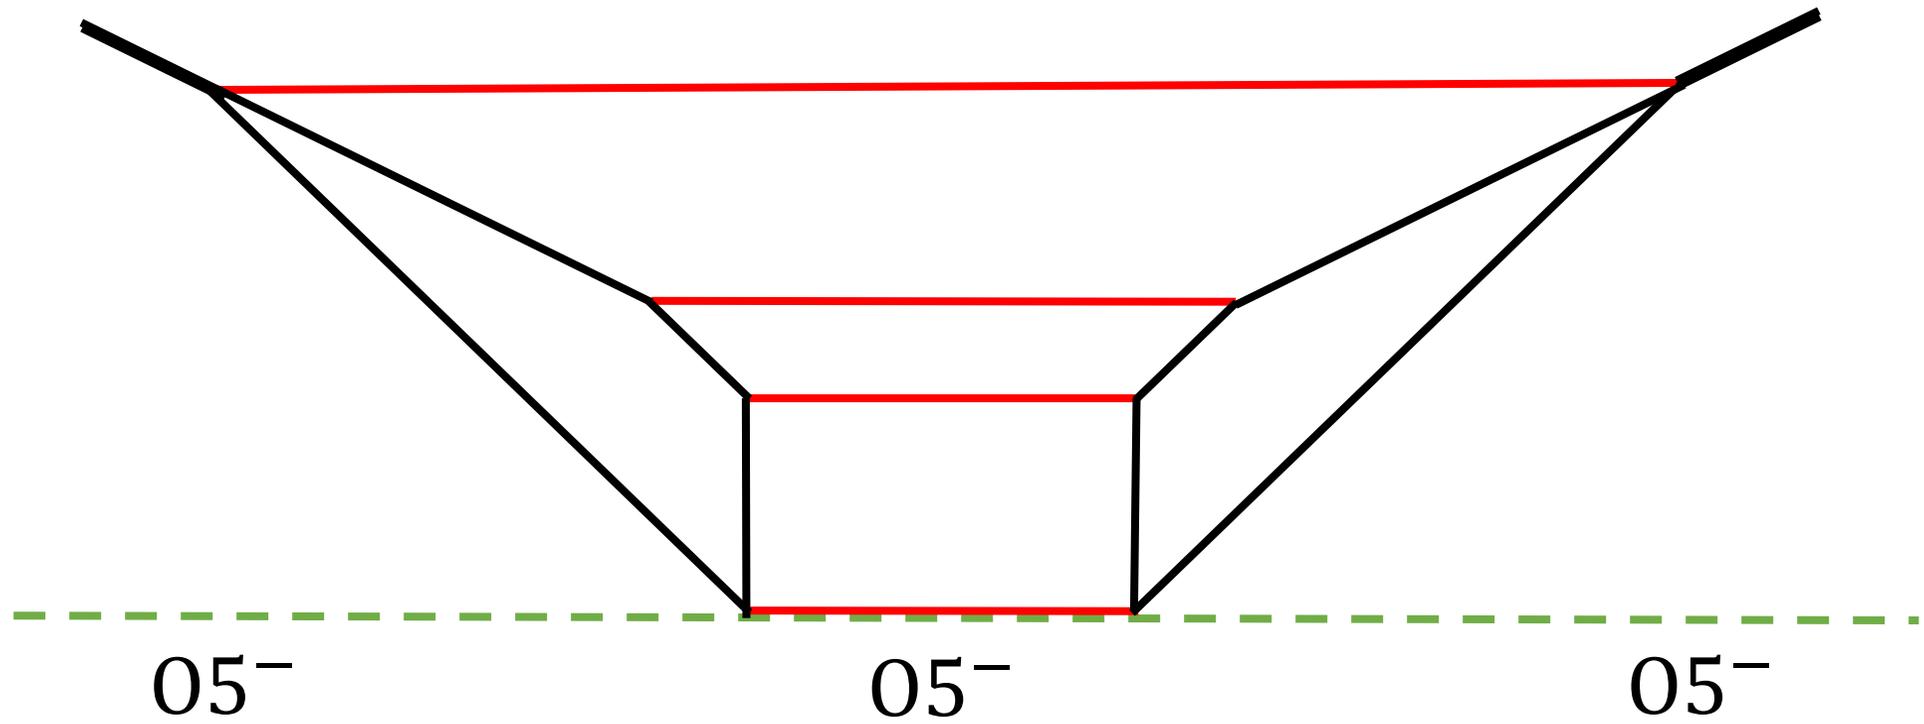

- In fact, there is another way to obtain a 5-brane web for the pure  $G_2$  gauge theory.

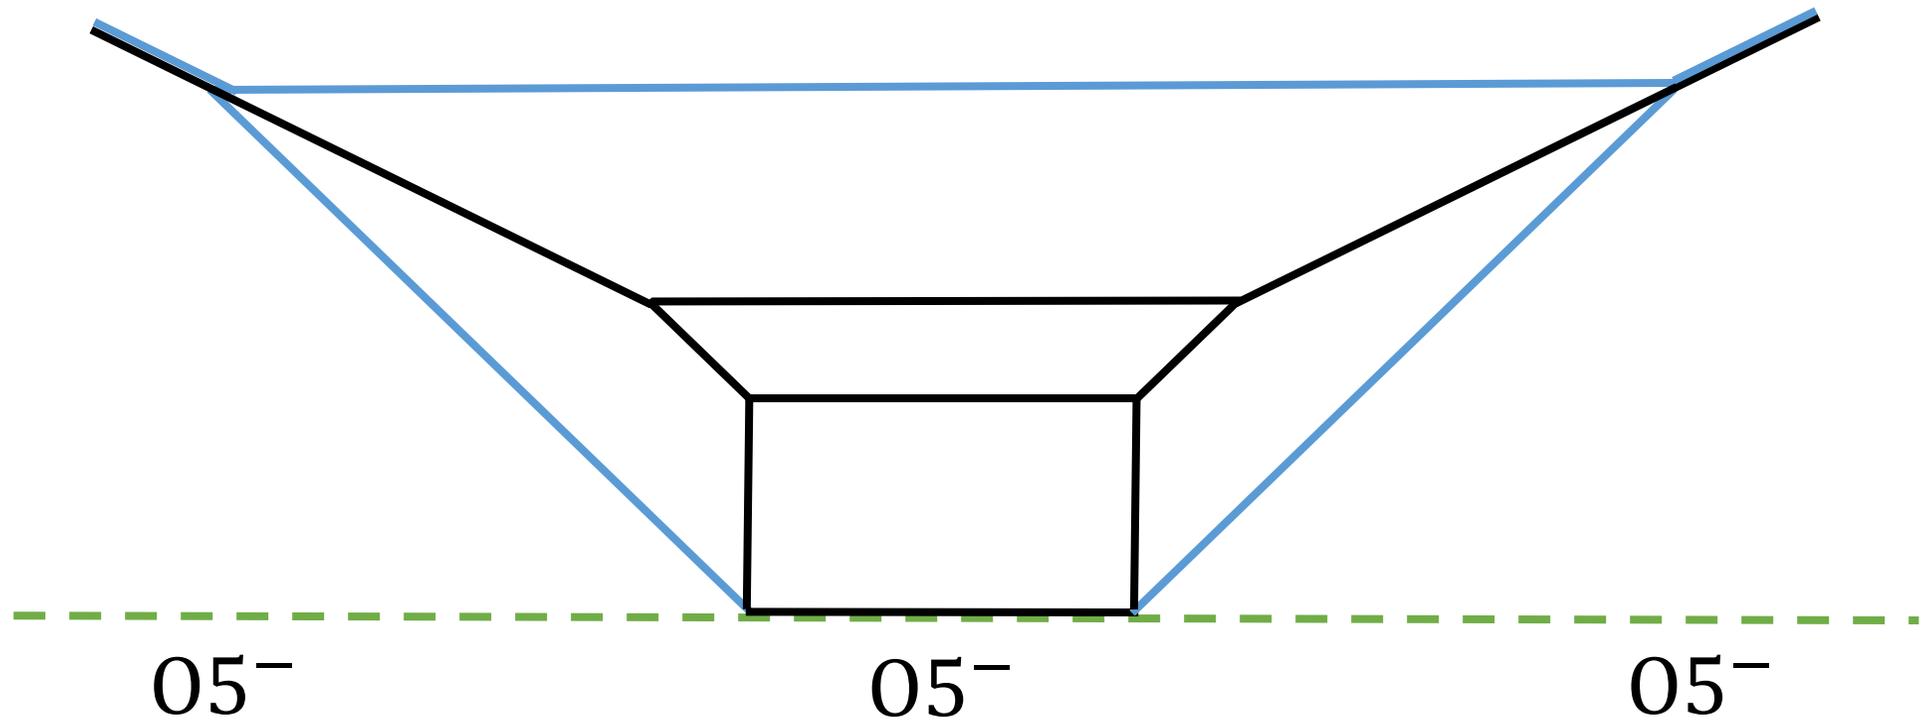

- What we have done:

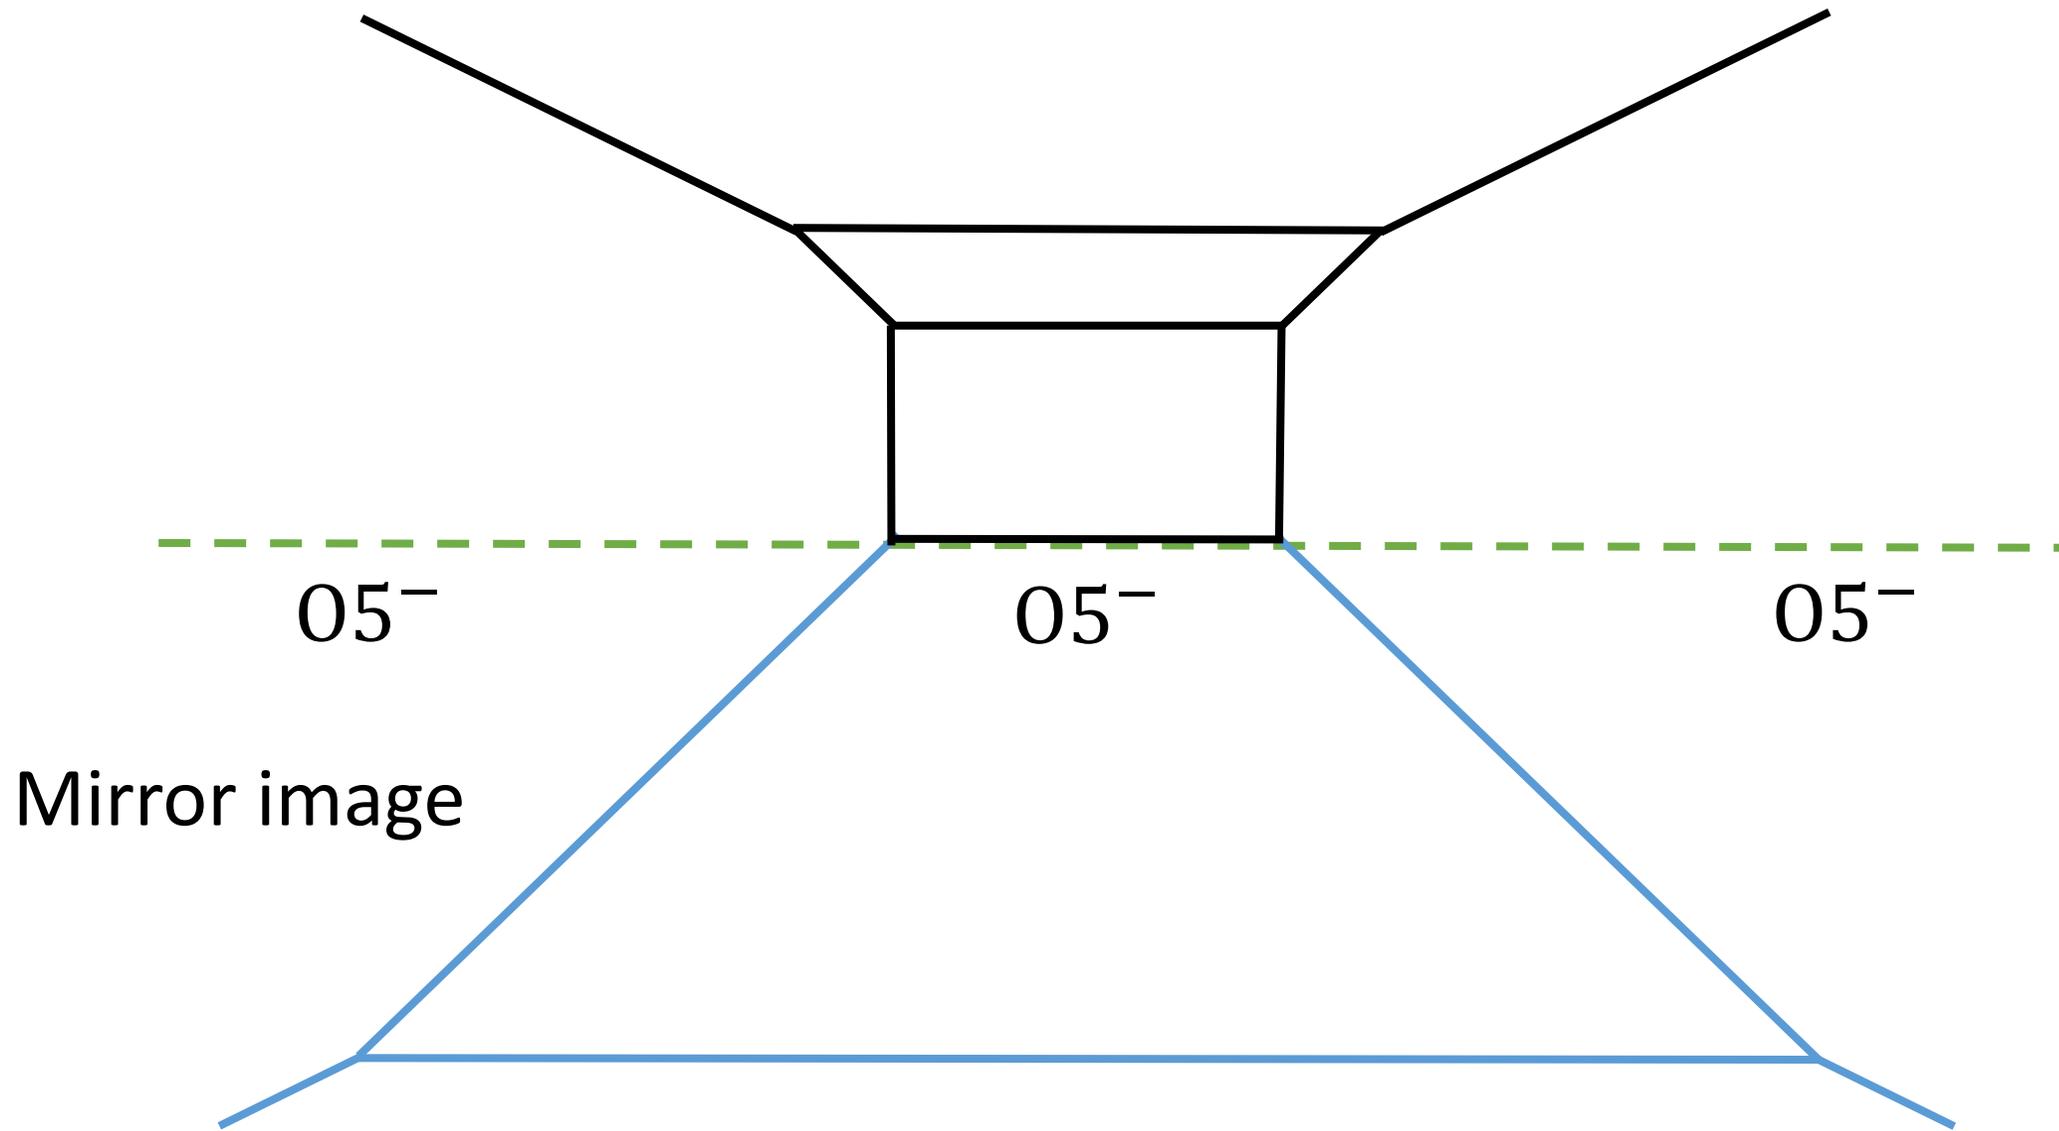

- The pure  $G_2$  gauge theory:

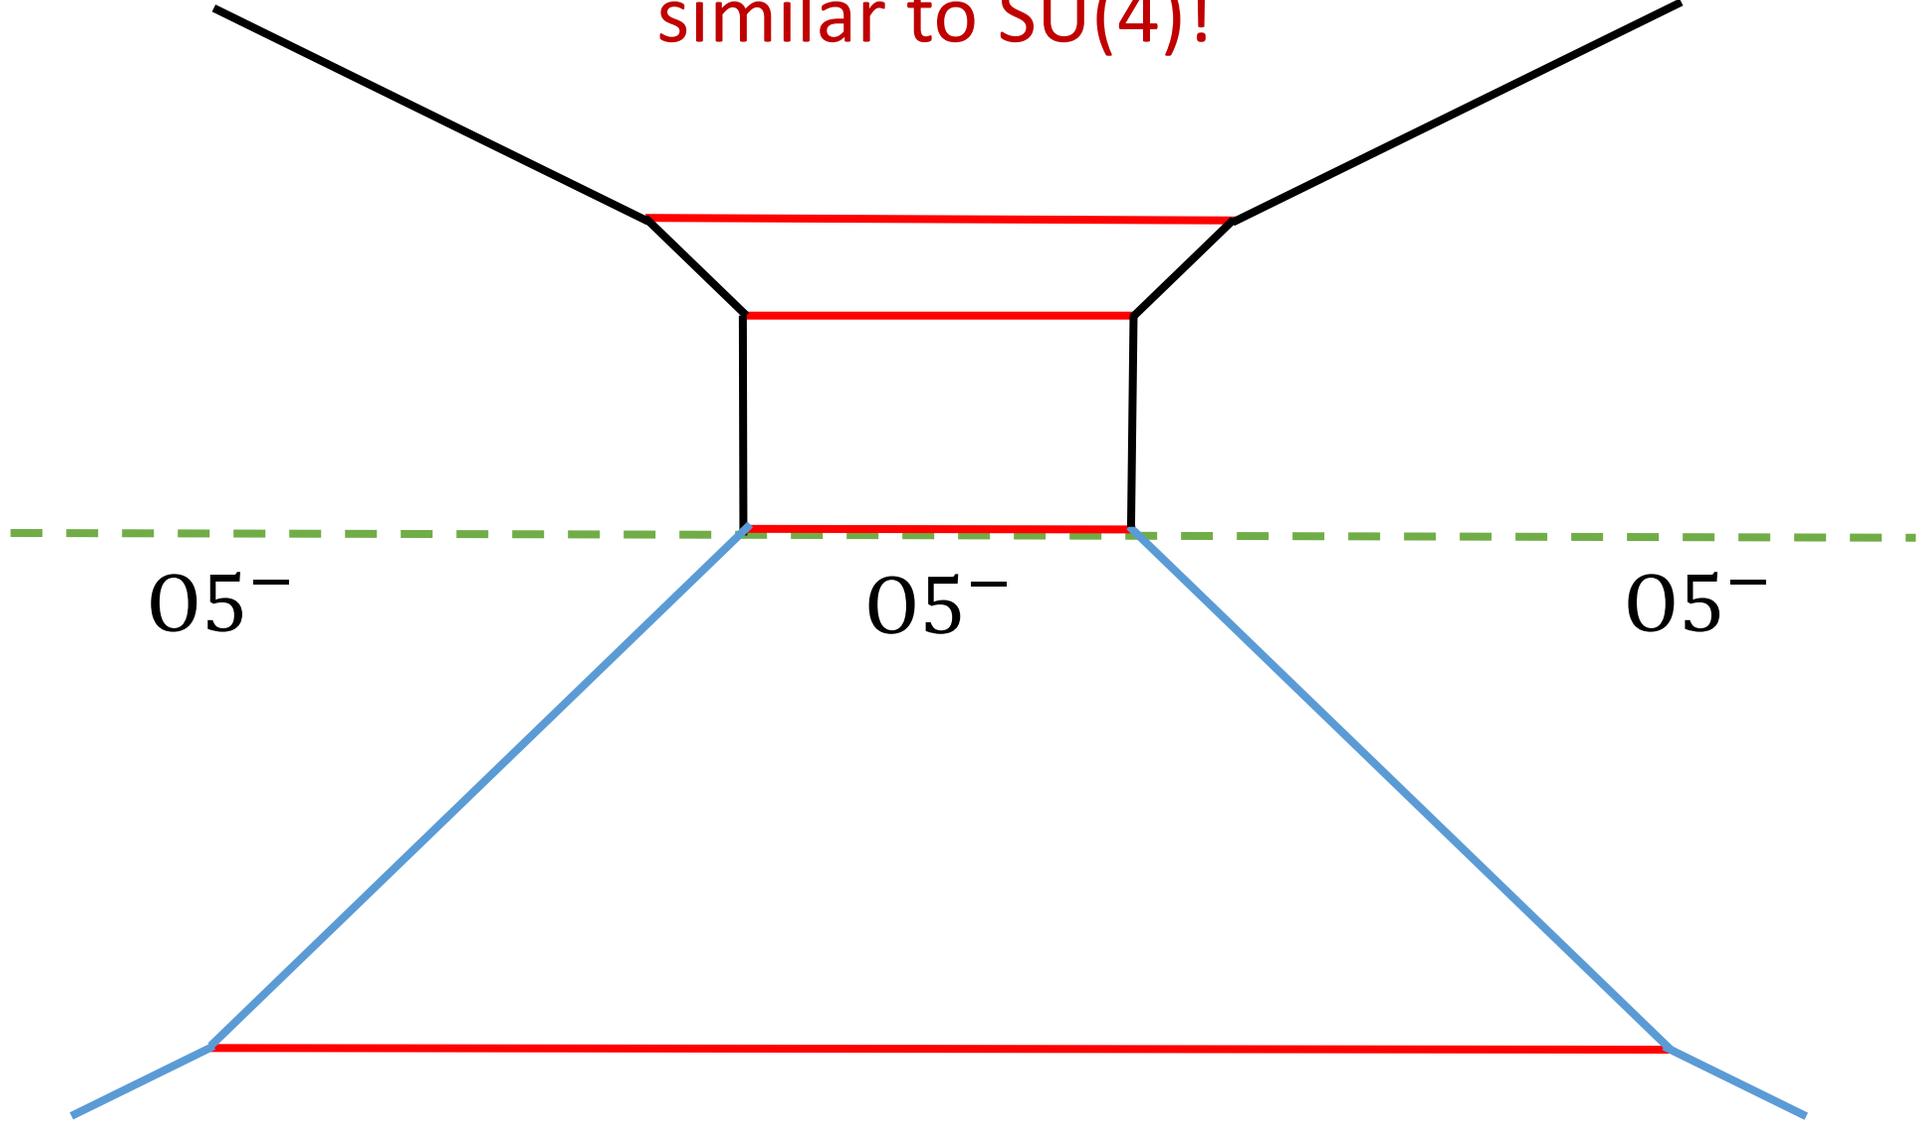

- The pure  $G_2$  gauge theory:

similar to SU(4)!

## 2. Nekrasov partition function of the pure $G_2$ gauge theory

- The application of the topological vertex to a 5-brane web computes the Nekrasov partition function of a 5d theory realized on the web.

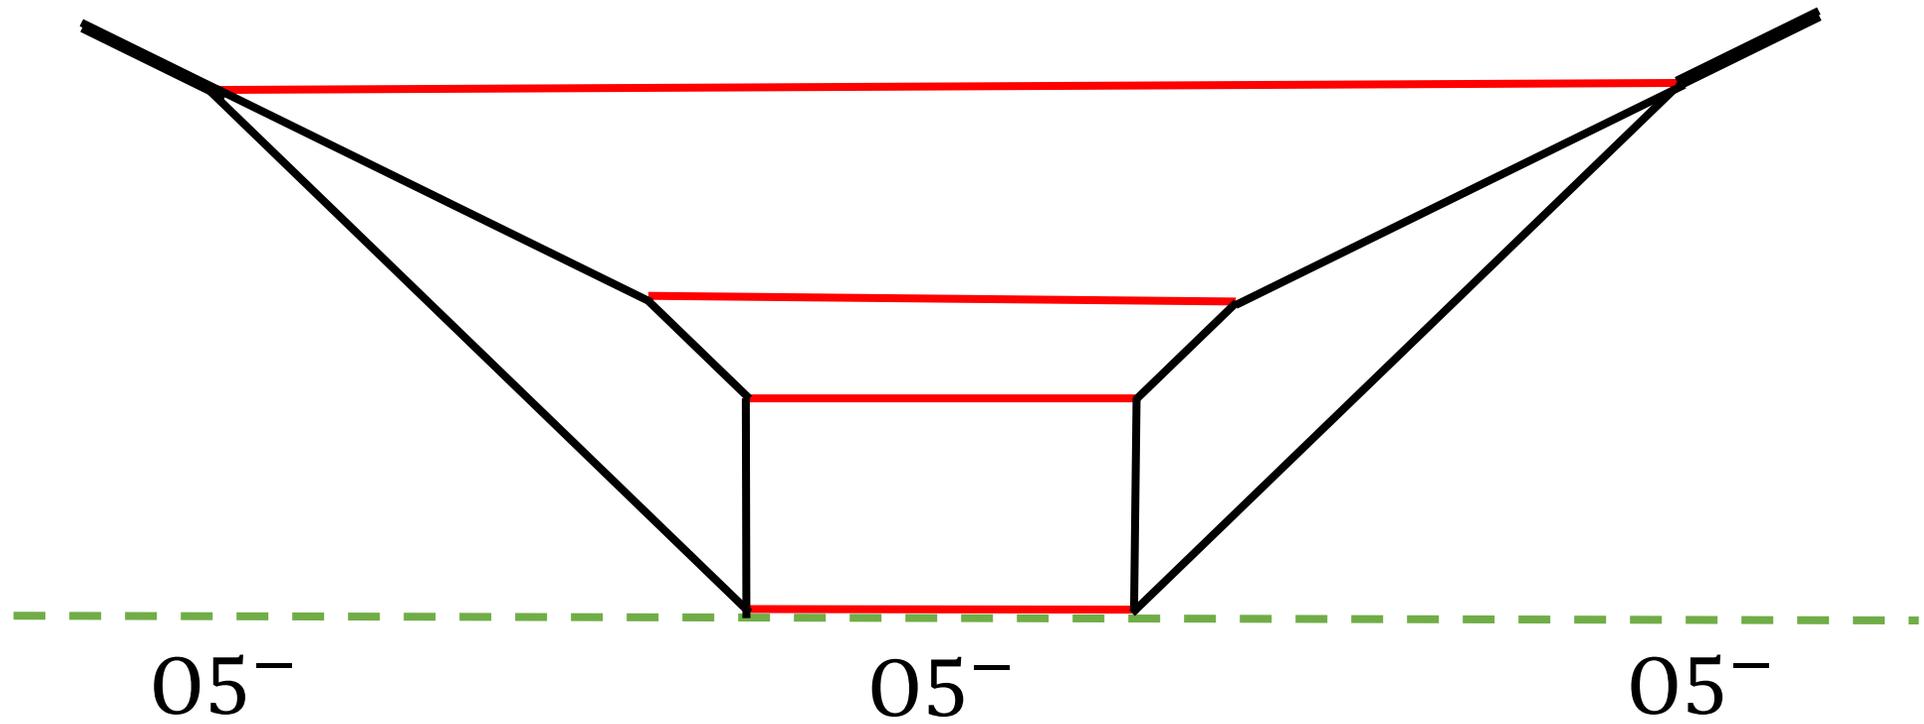

Aganagic, Klemm, Marino, Vafa 03  
Awata, Kanno 05, Iqbal, Kozcaz Vafa 07

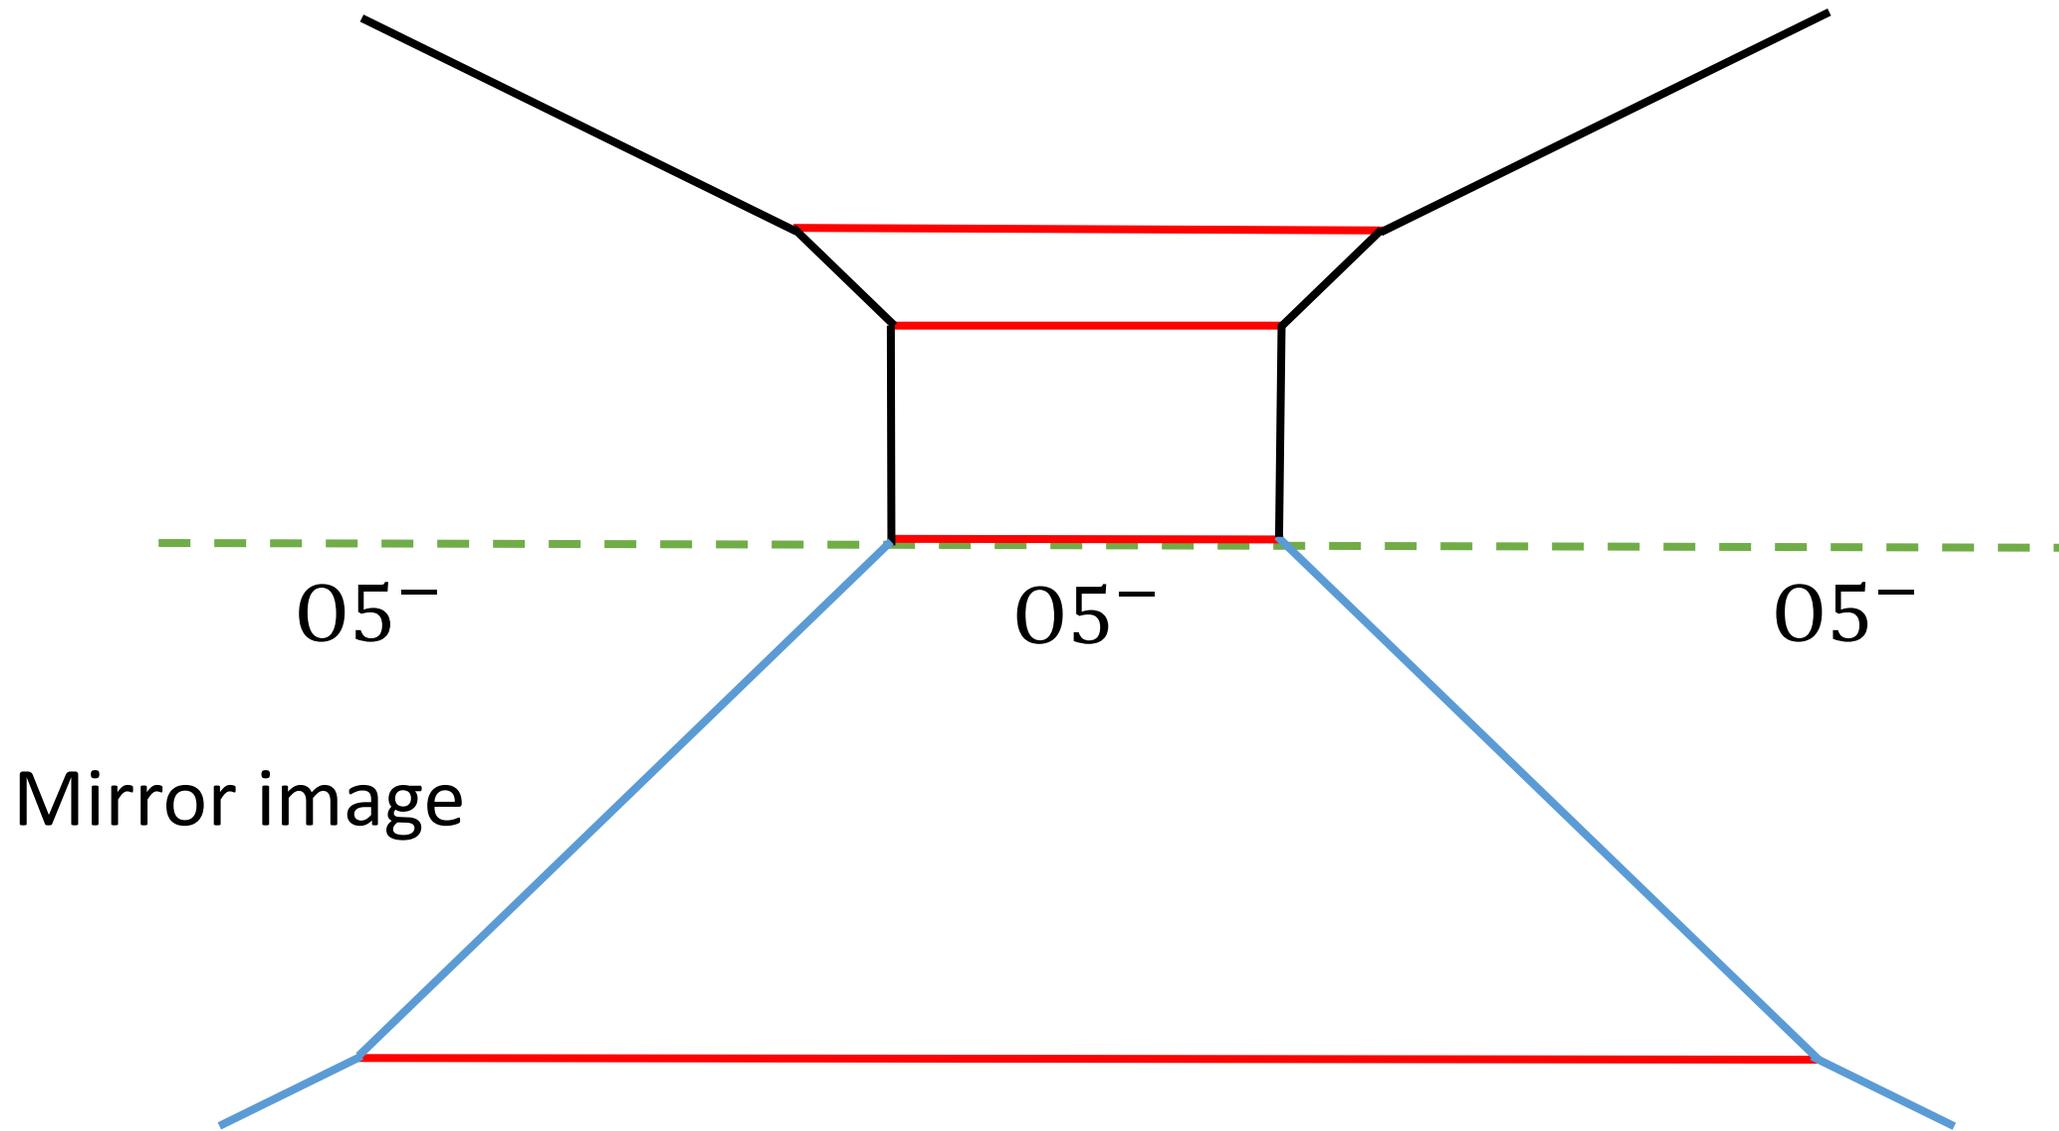

- Recently, the formalism is extended to certain configurations with an  $O5$ -plane.

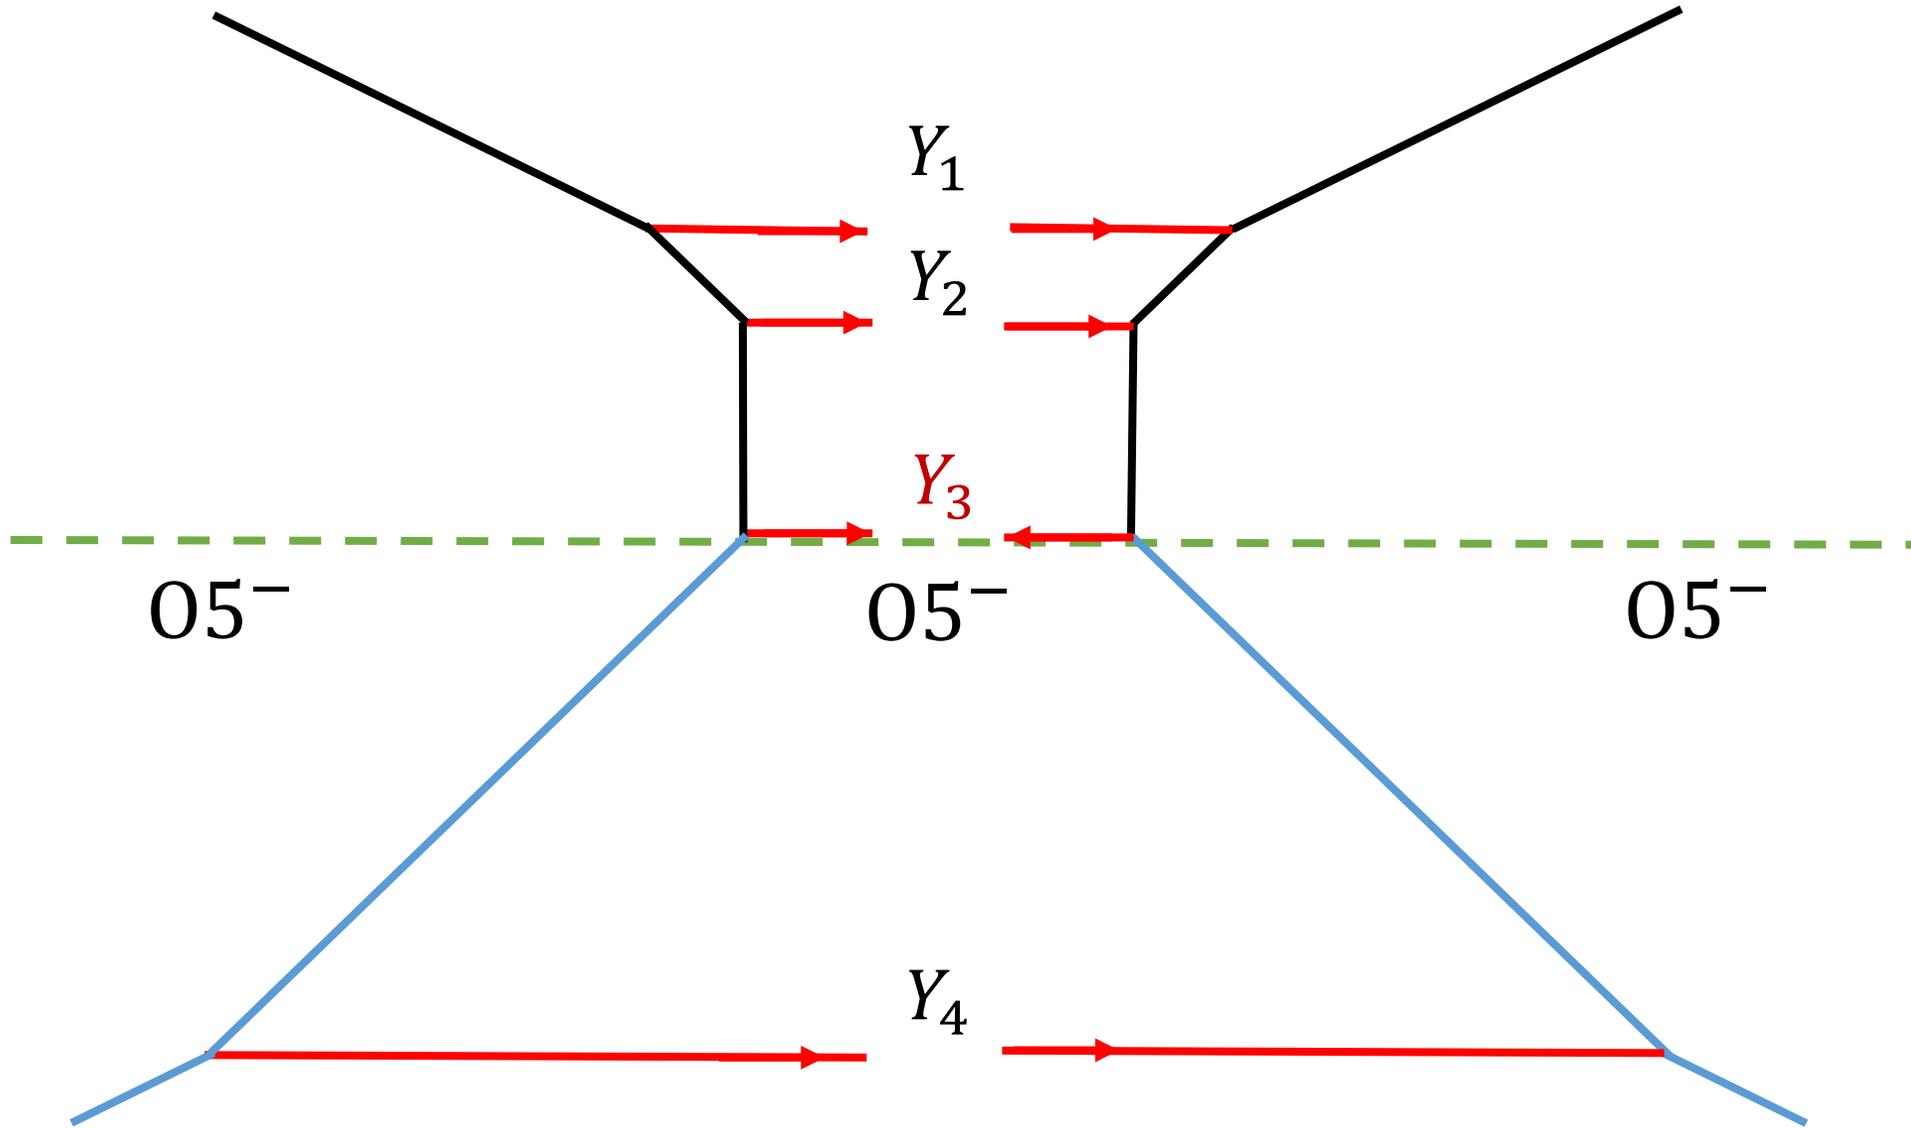

Kim, Yagi 17

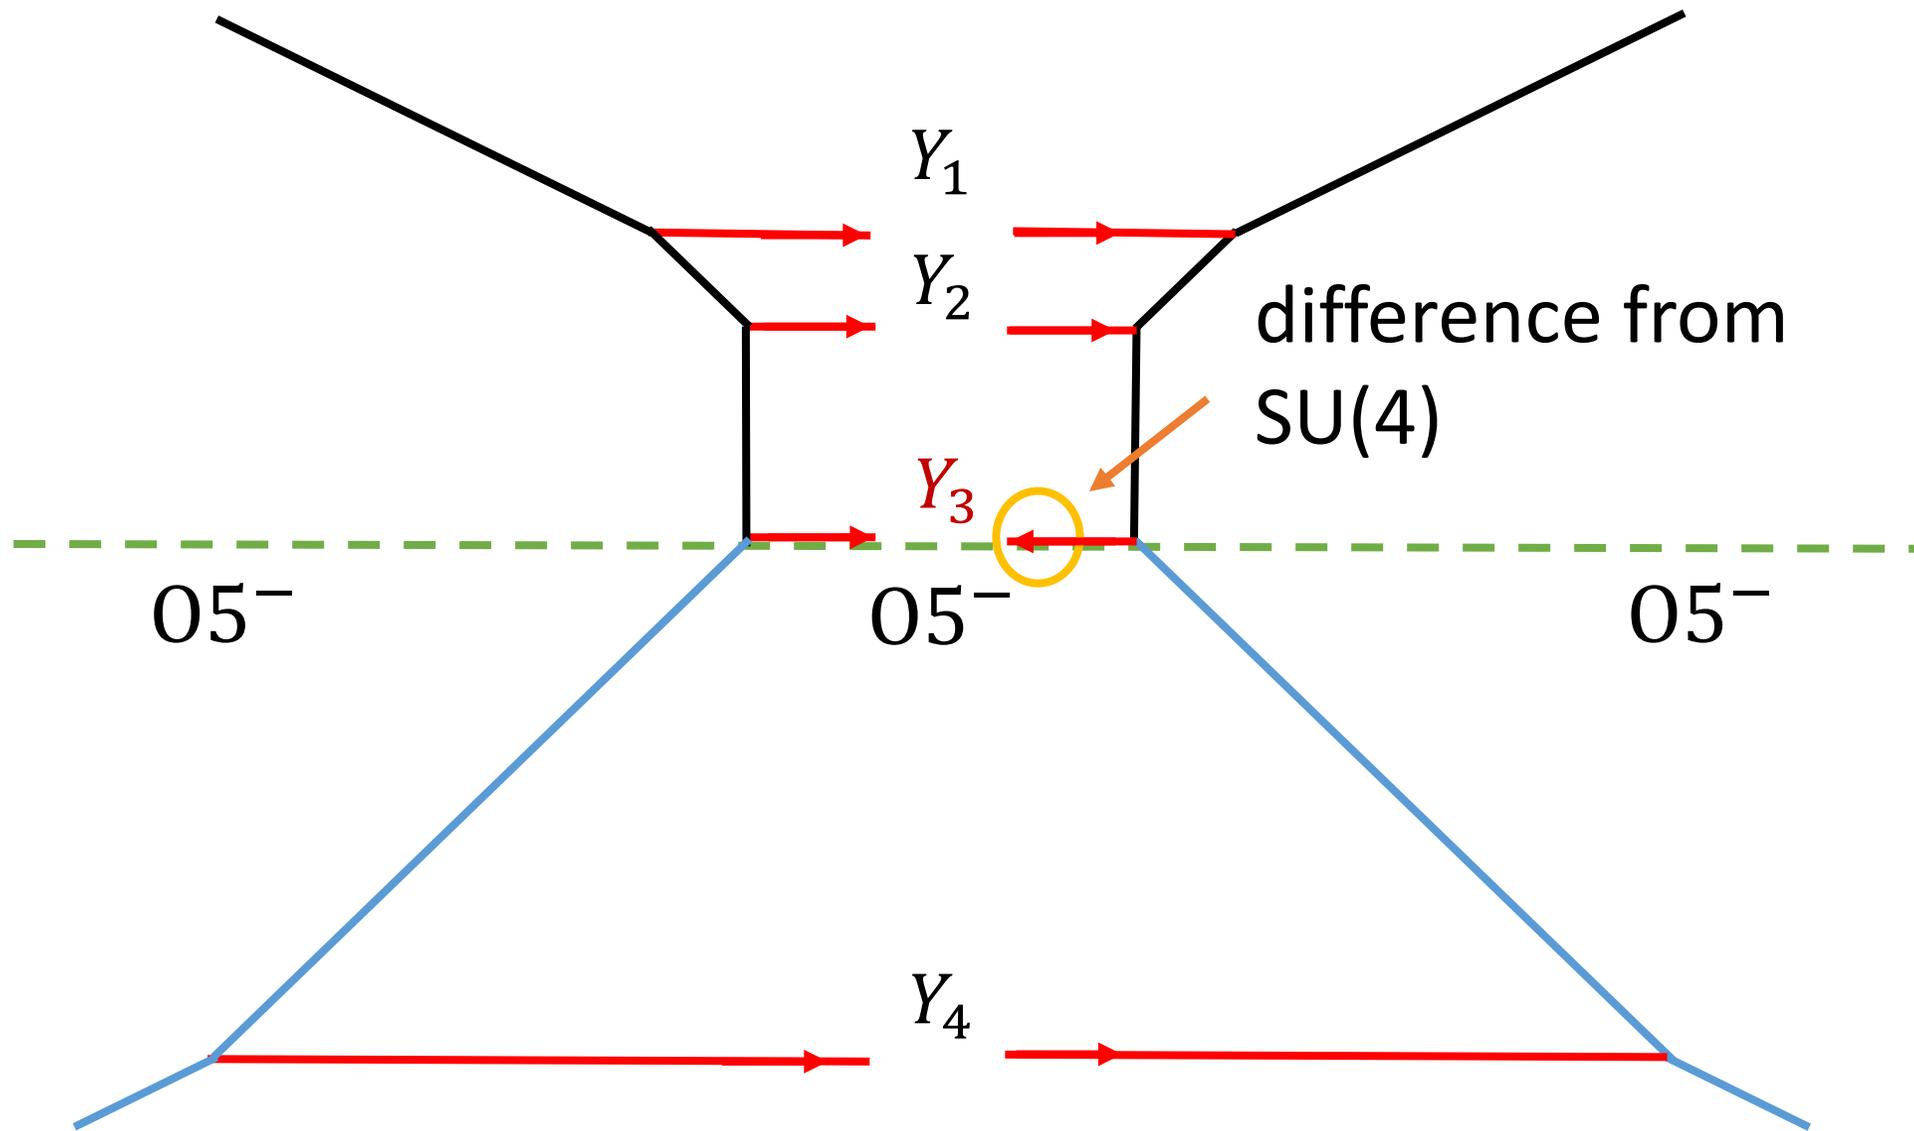

- The method makes use of the mirror image with a careful assignment of Young diagrams and the framings.

- The pure  $G_2$  gauge theory:

$$Z_{G_2} = \sum_{\{Y_i\}} (-1)^{|Y_3|} f_{Y_1}^3 f_{Y_2}^1 f_{Y_3}^1 f_{Y_4}^{-3} \prod_{i=1}^4 (-Q_{B_i})^{|Y_i|}$$

$$Z_L(\{Q_{ij}\}: Y_1, Y_2, Y_3, Y_4) Z_R(\{Q_{ij}\}: Y_1, Y_2, Y_3^t, Y_4)$$

- We compared the result with the known result from field theory and found agreement until the two-instanton order.

Hanany, Mekareeya, Razamat 12

Keller, Song 12

Cremonesi, Ferlito, Hanany, Mekareeya 14

## 5. Conclusion

- We constructed two types of 5-brane web diagrams for the pure 5d  $G_2$  gauge theory.
- Surprisingly, the web diagrams are simple in a sense that they are given by standard 5-brane webs with an orientifold 5-plane.
- The diagrams can be applied in various ways and we saw the  $G_2 \leftrightarrow SU(3)_7$  duality and also computed the Nekrasov partition function of the pure  $G_2$  gauge theory.

- It is straightforward to add flavors to the diagrams of the pure  $G_2$  gauge theory.
- We can compute the Nekrasov partition function of the  $G_2$  gauge theories with flavors.
- It would be interesting to compare it with the result computed by different methods recently.

HH, Kim, Lee, Yagi 18

Kim, Kim, Kim, Lee, Park 18  
Del Zotto Lockhart

- For the case with the maximal number of flavors, there are also dualities among  $G_2 + 6 F$ ,  $Sp(2) + 2 AS + 4 F$ ,  $SU(3)_4 + 6 F$ .

Jefferson, Katz, Kim, Vafa 18

- We can see the dualities also from 5-brane webs.
