ELECTRON MIXING

■ *Light HNL: Drell-Yan Z (on-shell)*

— *Sensitive to all flavor mixings* —

$$e^+e^- \rightarrow Z \rightarrow \nu N \rightarrow \nu/\ell + nj$$

■ *Heavy HNL: t-channel W*

— *Sensitive to electron mixing* —

FUTURE COLLIDER LANDSCAPE

Abdullahi et al [2203.08039]

— GOING BEYOND —

- *Exp searches consider 1HNL mixing to 1 flavor at a time*
- *Are sensitive to very large mixings*

What do we learn from these analyses?

SUMMARY

- *Colliders are good places to search for HNLs*
— *LEP, LHC and more to come* —
- *LHC is already improving LEP*
- *Analyses are improving*
— *trileptons, DV, OS dileptons* —
- *Still things to be improved*
— *going beyond single mixing hypothesis* —
- *There might be hope for LNV signals*

Thank you!
