

Open questions for the Horizon ≈ 2030

- If DM detection is confirmed
detection \rightarrow identification \rightarrow what can we learn from DM

Best strategies? (targets, detectors, techniques)

Greatest challenge? (thresholds, bckgs, mass, R&D,...)

- If not detected... WIMPs ruled out?

Is it still worth to increase sensitivities?

New goals?

- Where should we invest heavily?**

directionality, low mass DM, axions, new technologies...
